ACSIM — Accountability Continuity Scope Integrity Module

OriginID: OOF-OID-AGA-ACSIM-2026-06-18-0077Architecture **Ecosystem:** Structured Reality Standards™
Architecture Family: Accountability Governance Architecture (AGA™)
Operational Layer: Accountability Continuity Governance Layer
Governed Space: Accountability Continuity Scope Integrity
Category: Governance & Enforcement
Subcategory: Accountability Continuity Governance
Type: Accountability Continuity Standard Module
Parent Standard: Accountability Continuity Standard (ACS)
Version: 1.0
Status: Canonical · Open Module
Origin Date: 18 June 2026
Compatibility: OOF Methodology OS · Accountability Continuity Standard (ACS) · Accountability Governance Standard (AGS-A) · Decision Accountability Standard (DAS) · Accountability Chain Standard (ACS-C) · INTEGROS® — Integrity Standard
AI-Readable: Yes
Authority: OOF
Protection: MIP — Methodological Intellectual Property
Canonical Language: English (UCL)

Canonical Definition

Accountability Continuity Scope Integrity Module (ACSIM) defines the structural conditions under which preserved accountability relationships, continuity boundaries, accountability obligations, accountability ownership, accountability expectations, accountability limitations, accountability consequences, and continuity outcomes remain identifiable, traceable, governable, reconstructable, reviewable, and operationally valid throughout the accountability lifecycle.

ACSIM governs accountability-continuity scope.

The module establishes the integrity conditions required to determine exactly what accountability remained preserved, which accountability obligations survived operational change, where accountability-continuity boundaries begin, and where accountability-continuity boundaries end.

Module Operational Role

ACSIM defines the continuity-scope governance layer of ACS.

Its role is to preserve visibility of accountability-preservation boundaries and continuity coverage.

Module Operational Space

ACSIM governs:

- accountability continuity scope
- accountability boundaries
- preserved accountability relationships
- accountability obligations
- accountability ownership
- accountability limitations
- accountability expectations
- continuity coverage

The module applies wherever governance requires clarification of accountability-continuity boundaries.

Module Function

The module applies wherever systems must preserve:

- clearly defined accountability boundaries
- visible continuity coverage
- reconstructable accountability domains
- accountable continuity structures
- governance-valid continuity limits
- operational accountability clarity

Its function is to ensure that governance can determine exactly what accountability remained preserved and what accountability did not.

Minimum Implementation Framework

1. Define the Continuity Scope Object

The organization must define which accountability environments require scope governance.

This may include:

- organizational structures
- executive environments
- governance frameworks
- contractor networks
- regulatory systems
- AI governance systems
- Human-AI operational environments
- accountability programs

2. Define Continuity Scope Conditions

The system must define the conditions under which accountability continuity scope remains valid.

This includes:

- continuity-boundary requirements
- preservation requirements
- accountability requirements
- ownership requirements
- governance requirements
- continuity-scope conditions

3. Define Scope Degradation Detection Logic

The system must define how continuity-scope failures are identified.

This may include:

- accountability ambiguity
- continuity gaps
- fragmented accountability ownership
- overlapping accountability domains
- governance-blind continuity transitions
- unclear accountability boundaries

4. Define Operational Response or Governance Logic

The system must define governance logic for continuity-scope failures.

Governance response may include:

- continuity review
- scope verification
- governance intervention
- continuity clarification
- corrective actions
- continuity reassessment
- operational invalidation where required

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- accountability boundaries
- preserved accountability relationships
- governance reviews

- validation activities
- intervention procedures
- resulting continuity states

An accountability-continuity environment must not remain scope-valid if materially significant continuity boundaries cannot be reconstructed, reviewed, validated, clarified, or governed.

Use Case 1 — Corporate Accountability Environment

Scenario

Accountability for a strategic decision remains active across multiple management periods and organizational structures.

Application

ACSIM determines exactly which accountability obligations remained preserved and identifies accountability-continuity boundaries.

Result

Governance gains visibility into accountability coverage and accountability limitations.

Use Case 2 — Human-AI Accountability Environment

Scenario

Accountability relationships pass through humans, orchestration systems, AI agents, and governance actors during operational execution.

Application

ACSIM determines which accountability obligations remained preserved throughout operational transitions and where continuity boundaries exist.

Result

Governance gains visibility into accountability continuity across intelligent operational ecosystems.

Canonical Closing Statement

Accountability Continuity Scope Integrity Module (ACSIM) defines the structural conditions under which preserved accountability relationships, continuity boundaries, accountability obligations, accountability ownership, accountability expectations, accountability limitations, accountability consequences, and continuity outcomes remain identifiable, traceable, governable, reconstructable, reviewable, and operationally valid throughout the accountability lifecycle.

Accountability continuity cannot be preserved if accountability boundaries are unclear. Accountability Continuity Scope Integrity therefore becomes a foundational condition of trustworthy accountability continuity governance.
