GOA™ Architecture Index

Governance Architecture

Official Governance Architecture for Organizations, Governments, Institutions, AI Systems, Autonomous Systems, Human-AI Environments, and Multi-Organization Governance Ecosystems.

GOA™ serves as the official OOF® governance architecture used for governance design, governance navigation, governance validation, governance coordination, governance interoperability, and governance architecture development across organizational, institutional, governmental, AI, autonomous, and future governance environments.

Governance Architecture™ defines the constitutional governance architecture required to establish, govern, validate, protect, preserve, and coordinate governance throughout the complete governance lifecycle.

GOA™ consists of 10 Core Parent Standards forming the primary constitutional governance backbone.

Additional compatible standards, bridge standards, and specialized governance standards may extend the architecture when new governance spaces are identified. However, the standards listed below form the official core governance structure of GOA™.

Canonical Definition

Governance Architecture™ is the constitutional governance architecture that defines the structural conditions under which governance remains legitimate, bounded, accountable, validated, protected, transparent, continuous, interoperable, and operationally trustworthy across complex governance environments.

Core Question

How can governance remain legitimate, trustworthy, interoperable, and continuously governable throughout its complete lifecycle?

Governance Flow

Authority → Boundary → Scope → Delegation → Accountability → Validation → Integrity → Transparency → Continuity → Interoperability

---

Core Parent Standards

1. Governance Authority Standard (GAS)

Governed Space: Governance Authority
Core Question: Who has the legitimate authority to govern?

OOF® · MIP® Protected · Free permitted use · Commercial/derivative use may require authorization · Active Protection
Canonical source: https://originopenfoundation.org/content/g/GOA%E2%84%A2.html

2. Governance Boundary Standard (GBS)

Governed Space: Governance Boundaries
Core Question: Where are the governance boundaries?

3. Governance Scope Standard (GSS)

Governed Space: Governance Scope
Core Question: What falls within governance?

4. Governance Delegation Standard (GDS)

Governed Space: Governance Delegation
Core Question: How may governance authority be delegated?

5. Governance Accountability Standard (GAS-A)

Governed Space: Governance Accountability
Core Question: Who remains accountable for governance outcomes?

6. Governance Validation Standard (GVS)

Governed Space: Governance Validation
Core Question: How is governance validated?

7. Governance Integrity Standard (GIS)

Governed Space: Governance Integrity
Core Question: How is governance protected from manipulation?

8. Governance Transparency Standard (GTS)

Governed Space: Governance Transparency
Core Question: How visible and understandable must governance be?

9. Governance Continuity Standard (GCS)

Governed Space: Governance Continuity
Core Question: How does governance remain functional over time?

10. Governance Interoperability Standard (GOIS)

Governed Space: Governance Interoperability
Core Question: How do multiple governance systems operate together?

Compatible OOF Architectures

GOA™ interoperates with multiple OOF® architectures governing
complementary operational and governance spaces:

- **ORA™ — Operational Reality Architecture** governs operational reality, operational execution, operational validity, and operational coordination.
- **CLIA® — Cognitive Governance Intelligence Architecture** governs cognition, reasoning, interpretation, and cognitive governance.
- **MGIA™ — Memory Governance Intelligence Architecture** governs memory continuity, memory integrity, memory governance, and organizational memory.
- **AGA™ — Accountability Governance Architecture** governs accountability relationships, responsibility allocation, delegation, and ownership structures.
- **AIG™ — AI Governance Architecture** governs AI behavior, AI decision governance, AI operational integrity, and trustworthy AI systems.
- **ASGA™ — Autonomous Systems Governance Architecture** governs autonomous systems, autonomous agents, and autonomous operational environments.

GOA™ serves as the constitutional governance architecture upon which
all OOF governance architectures are structurally built.

Architectural Position

GOA™ governs the complete governance lifecycle.

The architecture progresses through:
Governance Authority → Governance Boundaries → Governance Scope →
Governance Delegation → Governance Accountability → Governance Validation →
Governance Integrity → Governance Transparency → Governance Continuity →
Governance Interoperability

Together these standards govern how governance is established, bounded,
delegated, validated, protected, understood, preserved, and coordinated
across single organizations and complex governance ecosystems.

Canonical Principle

GOA™ does not govern the operational domain itself.

GOA™ governs how governance is structured so that every governance system remains legitimate, accountable, transparent, resilient, interoperable, and trustworthy throughout its complete lifecycle.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property
