Methodology Engineering™ Question Index

OOF Problem Space Intelligence Index™ (PSII™)

Transforming Knowledge, Expertise, Processes, and Ideas into Structured Methodologies

Organizations possess valuable:

- knowledge,
- expertise,
- operational experience,
- frameworks,
- processes,
- governance practices,
- lessons learned.

However, many of these assets remain undocumented, fragmented, difficult to scale, difficult to transfer, and difficult to protect.

Methodology Engineering™ exists to transform knowledge into structured methodologies.

This Question Index™ provides a structured collection of questions designed to support methodology creation, design, structuring, architecture development, and methodology transformation.

The objective is not to immediately create a methodology.

The objective is to understand what should become a methodology and how it should be structured.

Knowledge Identification

What knowledge should be preserved? What expertise exists within the organization? Which knowledge assets create value? Is the knowledge documented? Is critical know-how dependent on individuals? Which knowledge is transferable? Which knowledge is difficult to transfer? What operational experience should be preserved? What knowledge is repeatedly used? Which knowledge deserves methodological structure?

Problem Identification

What problem is being solved? Is the problem clearly defined? Does the problem occur repeatedly? Is the problem expensive to solve repeatedly? Are existing solutions inconsistent? Does the problem create operational risk? Is the problem growing over time? Can the problem be standardized? Does the problem require governance? Is a methodology necessary?

Methodology Creation

Should a methodology be created? What is the purpose of the methodology? What outcomes should the methodology produce? What principles should guide the methodology? What boundaries should be defined? What assumptions should be documented? What conditions should be established? What processes should be included? What should be excluded? What defines success?

Methodology Structure

What is the core architecture? Should the methodology contain modules? Which components are reusable? Which components are optional? How should the methodology be organized? Should standards be created? Should protocols be included? Should governance rules be defined? How should relationships be structured? How can complexity be reduced?

Methodology Design

Is the methodology understandable? Is the methodology scalable? Is the methodology modular? Is the methodology reusable? Is the methodology traceable? Is the methodology explainable? Is the methodology adaptable? Is the methodology auditable? Is the methodology maintainable? Is the methodology future-ready?

Governance Integration

Does the methodology require governance? Who governs the methodology? How are changes managed? Are responsibilities defined? Are authority boundaries established? Are escalation pathways defined? Is accountability assigned? Can governance decisions be audited? Are governance dependencies understood? Can governance integrity be maintained?

Methodology Scalability

Can the methodology scale across teams? Can it scale across organizations? Can it scale across industries? Can it scale internationally? Can it adapt to different environments? Can it support future growth? Are scalability constraints known? Does complexity increase with scale? Can adoption remain consistent? Can future modules be added?

Methodology Protection

Can the methodology be protected? Can ownership be demonstrated? Is the methodology unique? Does it contain original know-how? Should trademark protection be considered? Should registration be considered? Can methodology continuity be preserved? Can future development be protected? Are licensing opportunities available? Is long-term positioning possible?

Methodology Implementation

Can the methodology be implemented? What resources are required? Are implementation requirements realistic? Can implementation be measured? Can implementation success be verified? Are implementation risks known? Can implementation be standardized? Is training required? Are implementation dependencies known? Can implementation be scaled?

Methodology Evolution

How should the methodology evolve? Can new modules be added? Can standards emerge from it?

Can governance frameworks be derived? Can future versions be managed? How should improvements be recorded? Can feedback be integrated? Can innovation be supported? Will the methodology remain relevant? What is the long-term development pathway?

Methodology Engineering™

Methodology Engineering™ helps organizations transform knowledge, expertise, operational processes, frameworks, governance practices, and ideas into structured, scalable, reusable, and governable methodologies.

About the OOF Problem Space Intelligence Index™

The OOF Problem Space Intelligence Index™ (PSII™) is a growing collection of structured questions designed to help identify, understand, classify, and investigate problems before searching for solutions.

Questions are organized into categories, clusters, and problem environments to improve clarity, analysis, governance, and decision-making.

The objective is not merely to provide answers.

The objective is to ensure that the right questions are being asked.
