

ACM — Accountability Continuity Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-GOA-GASA-ACM-2026-06-22-0002

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: Governance Architecture (GOA™)

Governance Flow Position: Authority → Boundary → Scope →

Delegation → Accountability → Validation → Integrity → Transparency →

Continuity → Interoperability

Operational Layer: Governance Accountability Layer

Governed Space: Accountability Continuity

Category: Governance & Enforcement

Subcategory: Governance Accountability Governance

Type: Governance Accountability Standard Module

Parent Standard: Governance Accountability Standard (GAS-A)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 22 June 2026

Compatibility: OOF Methodology OS · Governance Accountability Standard (GAS-A)

· Governance Delegation Standard (GDS) · Governance Validation Standard (GVS)

· Accountability Governance Architecture (AGA™) · INTEGROS® — Integrity Standard

AI-Readable: Yes

Authority: OOF

Protection: MIP — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition System

Canonical Definition

Accountability Continuity Module (ACM) defines the structural conditions under which governance-accountability relationships remain preservable, attributable, traceable, reviewable, governable, enforceable, auditable, and operationally valid throughout the governance lifecycle.

ACM governs accountability continuity.

The module establishes the foundational conditions required to determine whether accountability remains preserved across governance transitions, authority transfers, organizational changes, operational events, AI systems, autonomous agents, and Human-AI governance environments.

Accountability may be assigned.

Accountability must also remain continuous.

ACM governs that continuity.

Module Operational Role

ACM defines the accountability-continuity governance layer of GAS-A.

Its role is to preserve accountability ownership throughout governance environments.

Module Operational Space

ACM governs:

- accountability continuity
- accountability preservation
- accountability lifecycle continuity
- accountability-transition continuity
- accountability ownership continuity
- accountability auditability
- accountability traceability
- accountability reconstruction

The module applies wherever accountability must remain preserved over time.

Module Function

The module applies wherever systems must preserve:

- continuous accountability ownership
- traceable accountability transitions
- reconstructable accountability history
- attributable accountability relationships
- governance-valid accountability records
- operational accountability stability

Its function is to ensure that governance can reconstruct how accountability remained preserved throughout operational reality.

Minimum Implementation Framework

1. Define the Accountability Continuity Object

The organization must define which governance environments require accountability-continuity governance.

This may include:

- organizations
- institutions
- governments
- governance committees
- corporate governance structures
- AI governance systems
- autonomous-agent ecosystems
- Human-AI governance environments

2. Define Accountability Continuity Conditions

The system must define the conditions under which accountability continuity remains valid.

This includes:

- continuity requirements
- preservation requirements
- ownership requirements
- traceability requirements
- validation requirements
- governance-valid continuity conditions

3. Define Continuity Degradation Detection Logic

The system must define how accountability-continuity failures are identified.

This may include:

- accountability gaps
- broken accountability chains
- undocumented accountability transfers
- accountability discontinuities
- missing accountability records
- unreconstructable accountability history

4. Define Operational Response or Governance Logic

the system must define governance logic for accountability-continuity failures.

Governance response may include:

- continuity review
- accountability verification
- governance intervention
- corrective actions
- continuity reconstruction
- accountability-preservation procedures
- operational invalidation where required

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- accountability transitions
- accountability ownership
- governance reviews
- intervention procedures
- validation activities
- resulting accountability states

A governance environment must not remain continuity-valid if materially significant accountability activities cannot be reconstructed, reviewed, preserved, validated, attributed, or governed.

Use Case 1 — Executive Leadership Transition

Scenario

An organization undergoes leadership changes while accountability for strategic outcomes must remain preserved.

Application

ACM governs accountability continuity, accountability-preservation procedures, and accountability-transition traceability.

Result

The organization gains stronger accountability continuity, reduced accountability ambiguity, and improved governance stability.

Use Case 2 — Human-AI Governance Environment

Scenario

Governance responsibilities transition between human governance actors and AI systems during long-term operational activities.

Application

ACM governs accountability continuity, accountability preservation, and governance-valid accountability transitions.

Result

The organization gains stronger Human-AI accountability continuity, reduced governance ambiguity, and

Canonical Closing Statement

Accountability Continuity Module (ACM) defines the structural conditions under which governance-accountability relationships remain preservable, attributable, traceable, reviewable, governable, enforceable, auditable, and operationally valid throughout the governance lifecycle.

Accountability that cannot remain continuous cannot remain governance-reliable. Accountability Continuity therefore becomes a foundational condition of trustworthy governance accountability governance.
