

Asset Identity Standard

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-ECO-AIS-2026-03-07-0001

Category: Economic & Value Standards

Subcategory: Asset Identity

Version: 2.0

Status: Canonical · Open Standard

Effective Date: 7 March 2026

Compatibility:

- Economic State Architecture
- Value Activation Standard
- Zero Value Asset Standard
- Value Flow Mechanism

Authority: OOF™ Origin Open Foundation™

Protection: Methodological Intellectual Property

Canonical Language: English

Canonical Definition System

An asset identity is the **unique, non-duplicable structural reference** that allows an asset to be recognized, tracked, and governed within an economic system.

Asset identity exists independently of economic value.

An asset may exist without value, but without identity it cannot be considered valid within a governed system.

A. Canonical Definition

AIS establishes the foundational condition required for reliable economic systems.

The objective is to ensure that:

- assets can be uniquely identified
- duplication is prevented
- origin can be referenced
- lifecycle can be traced
- responsibility can be anchored

This standard does not define value.

It defines what an asset is within a governed system.

B. Core Principle

An asset must be identifiable before it can be governed.

C. Core Requirements

All conditions **MUST** be present.

1. Unique Identity Reference

Each asset **MUST** have:

- a unique identity
 - a non-duplicable reference
 - system-level distinction
-

2. Origin Reference

The system **MUST** record:

- asset origin
 - creation or admission event
 - issuing or registering entity
-

3. Lifecycle Traceability

The system **MUST** allow:

- tracking of all lifecycle events
 - reference across validation, activation, transfer, and state changes
-

4. Responsibility Anchor

Each asset **MUST** be linked to:

- a responsible entity
 - a governance authority
 - or a system accountability structure
-

D. Prohibited Condition

No asset may participate in validation, activation, value generation, or economic distribution without a unique and verifiable identity.

Any asset without identity is considered invalid within the governed system.

E. Scope

Applicable to:

- physical assets
 - digital assets
 - tokenized assets
 - financial instruments
 - environmental credits
-

- AI datasets

The standard is technology-neutral.

F. Structural Principle

Identity precedes governance.

Governance precedes value.

Canonical Closing Statement

An asset that cannot be uniquely identified cannot be reliably governed, valued, or exchanged.
