

ACAIM — Accountability Continuity Accountability Integrity Module

OriginID: OOF-OID-AGA-ACAIM-2026-06-18-0080Architecture **Ecosystem:** Structured Reality Standards™

Architecture Family: Accountability Governance Architecture (AGA™)

Operational Layer: Accountability Continuity Governance Layer

Governed Space: Accountability Continuity Accountability Integrity

Category: Governance & Enforcement

Subcategory: Accountability Continuity Governance

Type: Accountability Continuity Standard Module

Parent Standard: Accountability Continuity Standard (ACS)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 18 June 2026

Compatibility: OOF Methodology OS · Accountability Continuity Standard (ACS) · Accountability Governance Standard (AGS-A) · Decision Accountability Standard (DAS) · Accountability Chain Standard (ACS-C) · INTEGROS® — Integrity Standard

AI-Readable: Yes

Authority: OOF

Protection: MIP — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition

Accountability Continuity Accountability Integrity Module (ACAIM)

defines the structural conditions under which accountability-preservation relationships, accountability transitions, accountability transfers, continuity decisions, continuity approvals, continuity validations, accountability outcomes, and accountability-governance activities remain attributable, accountable, traceable, governable, reconstructable, enforceable, reviewable, and operationally valid throughout the accountability lifecycle.

ACAIM governs accountability-continuity accountability.

The module establishes the integrity conditions required to determine who remained accountable for preserving accountability continuity, who approved accountability transitions, who governed accountability transfers, and who remains accountable when accountability-continuity failures occur.

Module Operational Role

ACAIM defines the continuity-accountability governance layer of ACS.

Its role is to ensure that accountability continuity remains

connected to accountable governance actors throughout the accountability lifecycle.

Module Operational Space

ACAIM governs:

- accountability continuity accountability
- continuity ownership
- continuity-decision accountability
- accountability-transfer accountability
- continuity-failure accountability
- governance accountability
- accountability-preservation accountability
- consequence-attribution preparation

The module applies wherever governance must determine accountability arising from accountability continuity.

Module Function

The module applies wherever systems must preserve:

- accountable continuity structures
- attributable continuity decisions
- reconstructable accountability history
- traceable continuity outcomes
- governance-valid accountability relationships
- operational continuity enforcement

Its function is to ensure that governance can determine who remains accountable for preserving accountability continuity and continuity-related outcomes.

Minimum Implementation Framework

1. Define the Continuity Accountability Object

The organization must define which accountability environments require accountability governance.

This may include:

- organizational structures
 - executive environments
 - governance frameworks
 - contractor networks
 - regulatory systems
 - AI governance systems
 - Human-AI operational environments
-

- accountability programs

2. Define Continuity Accountability Conditions

The system must define the conditions under which accountability continuity accountability remains valid.

This includes:

- attribution requirements
- accountability requirements
- enforcement requirements
- consequence requirements
- governance requirements
- accountability-valid continuity conditions

3. Define Accountability Degradation Detection Logic

The system must define how continuity-accountability failures are identified.

This may include:

- anonymous continuity decisions
- undocumented accountability approvals
- accountability gaps
- continuity ownership ambiguity
- governance-blind continuity activities
- unverifiable continuity accountability

4. Define Operational Response or Governance Logic

The system must define governance logic for continuity-accountability failures.

Governance response may include:

- accountability review
- attribution verification
- governance intervention
- corrective actions
- continuity reassessment
- enforcement procedures
- operational invalidation where required

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- continuity decisions
- accountability approvals
- accountability transfers
- governance reviews
- accountability relationships
- resulting continuity outcomes

An accountability-continuity environment must not remain accountability-valid if materially significant continuity activities cannot be attributed, reconstructed, reviewed, enforced, validated, preserved, or governed.

Use Case 1 — Executive Accountability

Handover

Scenario

Accountability for a major decision passes through multiple leadership teams before long-term consequences emerge.

Application

ACAIM reconstructs continuity decisions, accountability transfers, approvals, and governance actions throughout the accountability chain.

Result

Governance gains visibility into accountability for accountability-continuity failures.

Use Case 2 — Human-AI Accountability

Environment

Scenario

Accountability relationships transition between human supervisors, orchestration systems, AI agents, and governance actors during operational execution.

Application

ACAIM reconstructs continuity ownership, accountability approvals, governance responsibilities, and accountability relationships.

Result

Governance gains visibility into accountability for accountability-continuity decisions across intelligent

Canonical Closing Statement

Accountability Continuity Accountability Integrity Module (ACAIM)

defines the structural conditions under which accountability-preservation relationships, accountability transitions, accountability transfers, continuity decisions, continuity approvals, continuity validations, accountability outcomes, and accountability-governance activities remain attributable, accountable, traceable, governable, reconstructable, enforceable, reviewable, and operationally valid throughout the accountability lifecycle.

Accountability continuity without accountability creates governance blind spots. Accountability Continuity Accountability Integrity therefore becomes a foundational condition of trustworthy accountability continuity governance and trustworthy consequence attribution.
