

ACVIM — Accountability Continuity Validity Integrity Module

OriginID: OOF-OID-AGA-ACVIM-2026-06-18-0078Architecture **Ecosystem:** Structured Reality Standards™

Architecture Family: Accountability Governance Architecture (AGA™)

Operational Layer: Accountability Continuity Governance Layer

Governed Space: Accountability Continuity Validity Integrity

Category: Governance & Enforcement

Subcategory: Accountability Continuity Governance

Type: Accountability Continuity Standard Module

Parent Standard: Accountability Continuity Standard (ACS)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 18 June 2026

Compatibility: OOF Methodology OS · Accountability Continuity Standard (ACS) · Accountability Governance Standard (AGS-A) · Decision Accountability Standard (DAS) · Accountability Chain Standard (ACS-C) · INTEGROS® — Integrity Standard

AI-Readable: Yes

Authority: OOF

Protection: MIP — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition

Accountability Continuity Validity Integrity Module (ACVIM) defines the structural conditions under which accountability-continuity relationships, accountability ownership structures, accountability transfers, accountability delegations, accountability escalations, accountability validations, accountability outcomes, and accountability- governance activities remain legitimate, recognized, preserved, governable, reconstructable, reviewable, enforceable, and operationally valid throughout the accountability lifecycle.

ACVIM governs accountability-continuity validity.

The module establishes the integrity conditions required to determine whether accountability continuity remained legitimate during organizational transitions, governance changes, authority transfers, Human-AI operational interactions, automation events, and accountability succession processes.

Module Operational Role

ACVIM defines the continuity-validity governance layer of ACS.

Its role is to ensure that accountability continuity remains legitimate and governance-valid throughout the

Module Operational Space

ACVIM governs:

- accountability continuity validity
- accountability legitimacy
- accountability-preservation validity
- continuity recognition
- accountability enforceability
- governance-valid continuity
- accountability succession validity
- continuity lifecycle governance

The module applies wherever governance requires confirmation that accountability continuity remains valid.

Module Function

The module applies wherever systems must preserve:

- legitimate accountability relationships
- recognized accountability structures
- enforceable accountability obligations
- reconstructable continuity history
- governance-valid continuity states
- operationally reliable accountability preservation

Its function is to ensure that governance can determine whether accountability continuity remained valid despite operational, organizational, technological, or governance change.

Minimum Implementation Framework

1. Define the Continuity Validity Object

The organization must define which accountability environments require validity governance.

This may include:

- organizational structures
- executive environments
- governance frameworks
- contractor networks
- regulatory environments
- AI governance systems
- Human-AI operational environments
- accountability programs

2. Define Continuity Validity Conditions

The system must define the conditions under which accountability continuity remains valid.

This includes:

- legitimacy requirements
- preservation requirements
- recognition requirements
- enforceability requirements
- governance requirements
- continuity-valid conditions

3. Define Validity Degradation Detection Logic

The system must define how continuity-validity failures are identified.

This may include:

- invalid accountability transfers
- illegitimate continuity relationships
- unenforceable accountability structures
- governance-invalid continuity states
- accountability-preservation failures
- continuity legitimacy failures

4. Define Operational Response or Governance Logic

The system must define governance logic for continuity-validity failures.

Governance response may include:

- continuity review
- preservation verification
- governance intervention
- continuity reassessment
- corrective actions
- continuity validation
- operational invalidation where required

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- accountability relationships
- continuity validations

- governance reviews
- validation activities
- intervention procedures
- resulting continuity states

An accountability-continuity environment must not remain validity-valid if materially significant continuity relationships cannot be reconstructed, reviewed, validated, recognized, enforced, preserved, or governed.

Use Case 1 — Executive Accountability

Transition

Scenario

Accountability for a major strategic decision moves across several leadership teams over multiple years.

Application

ACVIM evaluates whether accountability continuity remained legitimate, enforceable, and governance-valid throughout the transitions.

Result

Governance gains visibility into the validity of accountability preservation.

Use Case 2 — Human-AI Accountability

Environment

Scenario

Accountability relationships transition between human supervisors, orchestration systems, AI agents, and governance actors during operational execution.

Application

ACVIM evaluates whether accountability continuity remained legitimate, preserved, recognized, and operationally valid.

Result

Governance gains visibility into the validity of accountability continuity across intelligent operational ecosystems.

Canonical Closing Statement

Accountability Continuity Validity Integrity Module (ACVIM) defines

the structural conditions under which accountability-continuity relationships, accountability ownership structures, accountability transfers, accountability delegations, accountability escalations, accountability validations, accountability outcomes, and accountability- governance activities remain legitimate, recognized, preserved, governable, reconstructable, reviewable, enforceable, and operationally valid throughout the accountability lifecycle.

Accountability continuity may exist, but continuity that lacks legitimacy or enforceability cannot be trusted. Accountability Continuity Validity Integrity therefore becomes a foundational condition of trustworthy accountability continuity governance.
