

ADCIM — Authority Delegation Continuity Integrity Module

OriginID: OOF-OID-AGA-ADCIM-2026-06-14-0014

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: Accountability Governance Architecture (AGA™)

Operational Layer: Authority Delegation Governance Layer

Governed Space: Authority Delegation Continuity Integrity

Category: Governance & Enforcement

Subcategory: Authority Delegation Governance

Type: Authority Delegation Standard Module

Parent Standard: Authority Delegation Standard (ADS)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 14 June 2026

Compatibility: OOF Methodology OS · Authority Delegation Standard (ADS) · Authority Governance Standard (AGS) ·

Authority Escalation Standard (AES) · Responsibility Governance Standard (RGS) · INTEGROS® — Integrity Standard

AI-Readable: Yes

Authority: OOF

Protection: MIP — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition

Authority Delegation Continuity Integrity Module (ADCIM) defines the structural conditions under which delegated authority remains continuously traceable, reconstructable, governable, accountable, and operationally valid throughout transfer, succession, escalation, inheritance, reassignment, organizational change, and operational transition.

ADCIM governs delegation continuity.

The module establishes the integrity conditions required to determine whether delegated authority remained preserved, transferred, inherited, reassigned, suspended, revoked, or terminated throughout its lifecycle.

Module Operational Role

ADCIM defines the delegation-continuity governance layer of ADS.

Its role is to preserve visibility of delegated authority throughout operational change and governance transitions.

Module Operational Space

ADCIM governs:

- delegation continuity
- delegated-authority transfer
- delegation succession
- delegation reassignment
- delegation lifecycle governance
- continuity accountability
- delegation traceability
- authority-transition governance

The module applies wherever delegated authority changes over time.

Module Function

The module applies wherever systems must preserve:

- continuous delegation visibility
- reconstructable delegation history
- accountable authority transitions
- governance-valid delegation continuity
- traceable authority movement
- operational delegation preservation

Its function is to ensure that governance can determine what happened to delegated authority throughout its lifecycle.

Minimum Implementation Framework

1. Define the Delegation Continuity Object

The organization must define which delegated-authority environments require continuity governance.

This may include:

- management delegation structures
- supervisory delegation chains
- contractor governance systems
- regulatory delegation environments
- AI orchestration systems
- autonomous governance structures
- Human-AI governance environments
- distributed authority systems

2. Define Delegation Continuity Conditions

The system must define the conditions under which delegation continuity remains valid.

This includes:

- continuity requirements
- transfer requirements
- succession requirements
- traceability requirements
- accountability requirements
- governance-valid continuity conditions

3. Define Continuity Degradation Detection Logic

The system must define how delegation-continuity failures are identified.

This may include:

- undocumented delegation transfers
- delegation gaps
- continuity breaks
- hidden reassignment events
- governance discontinuities
- delegation lifecycle ambiguity

4. Define Operational Response or Governance Logic

The system must define governance logic for delegation-continuity failures.

Governance response may include:

- continuity review
- delegation reconstruction
- governance intervention
- escalation
- corrective actions
- delegation verification
- operational invalidation where required

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- delegation transfers
- reassignment events
- succession activities
- governance reviews
- intervention procedures
- resulting delegation structures

A delegation-governance environment must not remain continuity-valid if materially significant delegation transitions cannot be reconstructed, reviewed, validated, or governed.

Use Case 1 — Organizational Delegation Chain

Scenario

A department manager delegates authority to a supervisor. The supervisor is later replaced and authority is reassigned to a successor.

Application

ADCIM reconstructs continuity of delegated authority throughout the transition process.

Result

Governance gains visibility into how delegated authority evolved and whether continuity remained preserved.

Use Case 2 — Multi-Agent Governance

Environment

Scenario

An orchestration system reassigns delegated authority between supervisory agents during operational restructuring.

Application

ADCIM governs continuity and traceability of delegated authority throughout the reassignment lifecycle.

Result

Governance gains visibility into delegated-authority evolution across intelligent operational systems.

Canonical Closing Statement

Authority Delegation Continuity Integrity Module (ADCIM) defines the structural conditions under which delegated authority remains continuously traceable, reconstructable, governable, accountable, and operationally valid throughout transfer, succession, escalation, inheritance, reassignment, organizational change, and operational transition.

Delegated authority may move, evolve, transfer, or terminate. Authority delegation continuity integrity therefore becomes a

foundational condition of trustworthy delegation governance.
