

AETIM — Authority Escalation Traceability Integrity Module

OriginID: OOF-OID-AGA-AETIM-2026-06-14-0024

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: Accountability Governance Architecture (AGA™)

Operational Layer: Authority Escalation Governance Layer

Governed Space: Authority Escalation Traceability Integrity

Category: Governance & Enforcement

Subcategory: Authority Escalation Governance

Type: Authority Escalation Standard Module

Parent Standard: Authority Escalation Standard (AES)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 14 June 2026

Compatibility: OOF Methodology OS · Authority Escalation Standard (AES) · Authority Governance Standard (AGS) ·

Authority Delegation Standard (ADS) · Evidence Accountability Standard (EAS) · INTEGROS® — Integrity Standard

AI-Readable: Yes

Authority: OOF

Protection: MIP — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition

Authority Escalation Traceability Integrity Module (AETIM) defines

the structural conditions under which authority escalation activities remain traceable, reconstructable, reviewable, auditable, attributable, governable, and operationally valid throughout the escalation lifecycle.

AETIM governs escalation traceability.

The module establishes the integrity conditions required to determine how escalation occurred, when escalation occurred, who initiated escalation, who received escalation, what evidence supported escalation, and how escalation was resolved.

Module Operational Role

AETIM defines the escalation-traceability governance layer of AES.

Its role is to preserve visibility and reconstructability of escalation pathways throughout governance environments.

Module Operational Space

AETIM governs:

- escalation traceability
- escalation reconstruction
- escalation auditability
- escalation-path visibility
- escalation history
- escalation evidence linkage
- escalation decision traceability
- governance traceability

The module applies wherever governance requires reconstruction of escalation activities.

Module Function

The module applies wherever systems must preserve:

- traceable escalation activities
- reconstructable escalation history
- auditable escalation decisions
- accountable escalation processes
- governance-valid escalation records
- operational escalation transparency

Its function is to ensure that governance can reconstruct and review escalation activities at any point in time.

Minimum Implementation Framework

1. Define the Escalation Traceability Object

The organization must define which escalation environments require traceability governance.

This may include:

- management escalation systems
- compliance escalation environments
- incident-management systems
- contractor governance structures
- safety escalation frameworks
- AI governance systems
- autonomous-agent environments
- Human-AI governance systems

2. Define Escalation Traceability Conditions

The system must define the conditions under which escalation

traceability remains valid.

This includes:

- traceability requirements
- reconstruction requirements
- evidence requirements
- accountability requirements
- auditability requirements
- governance-valid traceability conditions

3. Define Traceability Degradation Detection Logic

The system must define how escalation-traceability failures are identified.

This may include:

- missing escalation records
- undocumented escalation events
- incomplete escalation history
- evidence gaps
- governance-blind escalation activities
- unreconstructable escalation paths

4. Define Operational Response or Governance Logic

The system must define governance logic for escalation-traceability failures.

Governance response may include:

- escalation review
- audit procedures
- governance intervention
- escalation reconstruction
- corrective actions
- pathway verification
- operational invalidation where required

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- escalation activities
- escalation decisions
- escalation evidence
- governance reviews
- intervention procedures
- resulting escalation states

An authority-escalation environment must not remain traceability-valid if materially significant escalation activities cannot be reconstructed, reviewed, audited, validated, or governed.

Use Case 1 — Safety Incident Escalation

Environment

Scenario

A serious safety incident is escalated through multiple management levels before a final resolution is reached.

Application

AETIM reconstructs the escalation path, escalation decisions, evidence chain, and final resolution process.

Result

Governance gains visibility into the complete escalation lifecycle.

Use Case 2 — AI Escalation Environment

Scenario

An autonomous agent escalates a high-risk decision through multiple supervisory layers before reaching a human authority.

Application

AETIM preserves traceability of escalation events, escalation decisions, evidence, and governance actions.

Result

Governance gains visibility into escalation pathways across intelligent operational systems.

Canonical Closing Statement

Authority Escalation Traceability Integrity Module (AETIM) defines

the structural conditions under which authority escalation activities remain traceable, reconstructable, reviewable, auditable, attributable, governable, and operationally valid throughout the escalation lifecycle.

Escalation that cannot be reconstructed cannot be trusted. Authority escalation traceability integrity therefore becomes a foundational

condition of trustworthy escalation governance.
