

SGM — Social Gratuuity Module

Parent Standard: Appreciation Interaction Layer (AIL™)

Category: AI & Interpretation

Subcategory: Social Gratuuity & Human Reciprocity

Type: Appreciation Interaction Module

Version: 1.0

Status: Canonical · Open Module

Effective Date: 8 May 2026

Compatibility: OOF® Methodology OS™ · AIL™ · VFM™ · EVIP® · CLIA® · OGL™

Authority: OOF®

Protection: MIP® — Methodological Intellectual Property

Canonical Language: English (UCL™)

Canonical Definition

Social Gratuuity Module defines the structural conditions under which gratuity, tipping, and other voluntary appreciation expressions may operate as valid forms of social reciprocity, contribution acknowledgment, and human interaction recognition without becoming disguised obligation, hidden fee, manipulative extraction, or contractual payment substitute.

A system satisfies SGM only if:

- gratuity remains voluntary
- gratuity is clearly distinguishable from mandatory compensation
- social interaction and human acknowledgment remain valid grounds for appreciation expression
- non-gratuuity does not remove baseline dignity, access, or valid service treatment
- gratuity design does not exploit emotional pressure, dependence, or hidden expectation

A system that forces, disguises, or structurally pressures gratuity does not satisfy SGM.

Module Function

SGM defines the social reciprocity layer of gratuity-based appreciation.

It ensures that gratuity is not reduced to a payment add-on only, but remains a valid appreciation mechanism for:

- human presence
- attention
- communication
- warmth
- service quality
- recognition
- recurring social interaction
- contribution to human connection

The module applies wherever appreciation may arise from real social contact, including hospitality, local service environments, repeated human interaction, community-facing roles, and other physical or hybrid contexts where gratuity may reflect both service value and social acknowledgment.

Step 1 — Define Gratuity Form

The organization must define how gratuity may be expressed.

Minimum requirement:

- gratuity forms are explicit
 - monetary and non-monetary expressions are distinguishable where applicable
 - undefined gratuity channels are excluded from valid operation
-

Step 2 — Define Voluntary Boundary

The system must define what makes gratuity voluntary.

Minimum requirement:

- gratuity is not required for baseline participation or service access
 - non-gratuity does not trigger hidden penalty, exclusion, or dignity reduction
 - voluntary boundary is explicit and operationally visible
-

Step 3 — Define Distinction from Compensation

The system must define how gratuity remains separate from salary, fee, price, or contractual obligation.

Minimum requirement:

- gratuity is not disguised as mandatory payment
 - required charges are not mislabeled as social appreciation
 - users can distinguish social recognition from economic duty
-

Step 4 — Define Social Reciprocity Conditions

The system must define how gratuity may validly express recognition of human interaction and reciprocity.

Minimum requirement:

- appreciation of communication, attention, and respectful interaction is structurally allowed
 - social acknowledgment remains distinguishable from transactional obligation
 - gratuity may recognize not only service delivery, but also human presence and reciprocal interaction value
-

Step 5 — Define Anti-Coercion Conditions

The system must define how pressure, guilt extraction, deceptive framing, or hidden expectation is restricted.

Minimum requirement:

- coercive gratuity logic is identifiable
- manipulative prompts are excluded
- appreciation remains non-deceptive and socially fair

Step 6 — Preserve Social Interaction Integrity

The system must preserve gratuity as a recognition mechanism that supports rather than distorts human interaction.

Minimum requirement:

- gratuity does not degrade interaction into extraction
- recognition remains authentic in function
- social acknowledgment remains structurally clear and non-forced

Step 7 — Restrict Invalid Gratuity Design

The system must not be treated as valid if gratuity becomes forced, disguised, punitive, manipulative, or structurally misleading.

Minimum requirement:

- invalid gratuity conditions are identifiable
- deceptive or coercive gratuity design is blocked or invalidated
- social interaction does not become a hidden monetization trap

Scenario

A waitress, waiter, or service worker communicates with guests repeatedly, creates a welcoming atmosphere, gives attention, remembers people over time, and contributes to a more human experience than mere transaction.

Application

SGM is used to ensure:

- gratuity remains voluntary
- social interaction and acknowledgment may be validly appreciated
- gratuity remains distinct from required payment

- non-gratuity does not remove baseline respect or service legitimacy

Result

The environment gains a stronger social reciprocity structure in which gratuity may express appreciation not only for service execution, but also for human connection, attention, and repeated relational contact.

Scenario

People repeatedly meet in the same city environment, café, service place, or local social setting. Over time, communication becomes familiar, interaction becomes warmer, and real social bonds may emerge, including friendship, recognition, or even relationship formation.

Application

SGM is used to ensure:

- gratuity may remain a valid expression of appreciation for repeated social interaction
- recognition of familiarity and reciprocal human presence is structurally allowed
- the system does not force economic response, but preserves a voluntary appreciation pathway
- gratuity supports human acknowledgment without turning social contact into obligation

Result

The environment gains a healthier appreciation structure in which gratuity may support real-world social interaction, familiarity, and human bonding rather than reducing every contact to impersonal transaction.

Canonical Closing Statement

If gratuity cannot remain voluntary social recognition, it no longer functions as appreciation but as disguised obligation.
