

Air Integrity™ Standard

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-ENV-AI-2026-02-24-0001

Category: Environmental Integrity Standards (ENV)

Subcategory: Air Integrity™

Version: 1.0

Status: Canonical · Open Standard

Effective Date: 24 February 2026

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English

A. Standard Abstract

The **Air Integrity™ Standard** defines structural transparency conditions for operational activities that may influence air conditions within production, processing, or service environments.

The standard establishes a disclosure framework for air-relevant operational activities.

It does not measure air quality.

It does not define emission limits.

It does not replace environmental regulation or permit systems.

Air Integrity™ establishes **transparent disclosure of operational reality**.

B. Canonical Definition

Air Integrity™ is the structural transparency condition in which air-relevant operational activities, emission status, mitigation mechanisms, and responsible entity are publicly disclosed within an operational environment.

Air Integrity™ defines integrity of disclosure rather than certification of environmental performance.

C. Structural Base

This standard is based on the following principles:

- Reality Disclosure Principle
- Transparency Before Certification
- Operational Accountability
- Community Awareness
- Non-Substitution of Regulatory Authority

Air Integrity™ ensures that operational activities affecting air conditions are transparently acknowledged rather than selectively presented.

D. Scope

This standard applies to operational environments including:

- manufacturing facilities
- workshops and processing sites
- agricultural operations
- energy-related production environments
- service facilities using combustion or solvent processes

This standard does not replace:

- national air quality legislation
- emission permit systems
- environmental compliance inspections
- regulatory air monitoring frameworks

Air Integrity™ operates as a transparency layer rather than an environmental control system.

E. Structural Transparency Conditions

Entities referencing the Air Integrity™ Standard must maintain disclosure of operational activities that may influence air conditions.

1. Emission Activity Disclosure

Organizations must disclose whether operations include activities that may generate air emissions.

Examples include:

- combustion processes
- dust generation
- solvent or VOC use
- fuel-based heating
- other air-impacting operational activities

If none apply, this must be clearly declared.

2. Mitigation Mechanism Transparency

Organizations must disclose whether mitigation or control mechanisms exist.

Examples may include:

- no emission control systems
- natural ventilation
- mechanical ventilation
- filtration systems
- dust separation systems
- other mitigation mechanisms

The standard requires disclosure of mechanisms, not performance claims.

3. Measurement Status Disclosure

Organizations must disclose the status of emission measurement.

Possible declarations include:

- emissions regularly measured
- emissions occasionally measured
- emissions not measured
- measurement not legally required

Absence of measurement must not be concealed.

4. Responsibility Attribution

A responsible entity must acknowledge accountability for disclosed information related to air-relevant operations.

Air Integrity™ requires visible responsibility for operational disclosure.

F. Compatibility

Air Integrity™ operates within the **Environmental Integrity Standards architecture** and may function alongside:

- Soil Integrity™ Standard
- Water Integrity™ Standard
- Carbon Integrity™ Standard
- Origin Eco™ Standard

These standards together form a structural environmental transparency framework.

Canonical Closing Statement

Transparency of operational reality strengthens environmental trust.

Canonical Closing Statement

Soil-based production integrity begins with transparent disclosure of production inputs.
