

Shared Objective Coordination Module (SOCM)

OriginID: OOF-OID-ASGA-ACOS-SOCM-2026-07-08-0003
Architecture Ecosystem: Structured Reality Standards™
Architecture Family: Autonomous Systems Governance Architecture (ASGA™)
Operational Layer: Autonomous Operational Governance Layer
Governed Space: Shared Objective Coordination
Category: Governance & Enforcement
Subcategory: Autonomous Operational Governance
Type: Autonomous Coordination Standard Module
Parent Standard: Autonomous Coordination Standard (ACOS)
Version: 1.0
Status: Canonical · Open Module
Origin Date: 8 July 2026
Compatibility: OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Canonical Definition

Shared Objective Coordination Module (SOCM) defines the structural conditions under which multiple autonomous operational actors coordinate their activities toward shared operational objectives while preserving governance alignment, operational consistency, and collective mission integrity.

SOCM governs shared objective coordination.

The module establishes the governance conditions required to ensure that autonomous systems pursue common operational objectives through coordinated, governance-approved actions.

Coordination is not only about working together.

Coordination is about working toward the same objective.

SOCM governs that objective alignment.

Module Operational Role

SOCM defines the shared objective coordination layer of ACOS.

Its role is to ensure that autonomous operational actors remain aligned with common operational goals throughout coordinated

execution.

Module Operational Space

SOCM governs:

- shared objective coordination,
 - operational objective alignment,
 - collective mission coordination,
 - coordinated goal execution,
 - collaborative objective governance,
 - mission synchronization,
 - operational objective consistency,
 - governed collaborative execution.
-

Module Function

The module applies wherever multiple autonomous operational actors must coordinate activities to achieve shared operational objectives under continuous governance.

Minimum Implementation Framework

1. Define the Shared Objective Object

Identify which operational objectives require coordinated autonomous execution.

2. Define Objective Coordination Conditions

Establish governance conditions governing shared operational objectives and coordinated execution.

3. Define Objective Failure Logic

Identify conditions where shared objectives become inconsistent, conflicting, incomplete, or governance-invalid.

4. Define Governance Response

Define governance actions for objective realignment, coordination adjustment, operational intervention, escalation, or mission review.

5. Preserve Objective Traceability

Preserve shared objectives, governance decisions, operational evidence, coordination records, and objective history.

Use Case 1 — Autonomous Emergency Response Network

Scenario

Autonomous drones, ground vehicles, and AI coordination systems respond jointly to a large-scale natural disaster.

Application

SOCM ensures that every autonomous operational actor remains aligned with the common emergency response objective.

Result

The response remains coordinated, efficient, and focused on shared operational outcomes.

Use Case 2 — Smart Manufacturing Ecosystem

Scenario

Multiple autonomous production systems coordinate manufacturing, quality inspection, packaging, and logistics.

Application

SOCM governs alignment with shared production objectives across all autonomous operational actors.

Result

The manufacturing ecosystem achieves coordinated, governance-approved operational performance.

Canonical Closing Statement

Governable coordination requires governable shared objectives.
Shared Objective Coordination ensures that autonomous operational actors remain aligned with common goals, preserving operational consistency, collective effectiveness, and trustworthy autonomous collaboration.
