

Governance Compatibility Module (GCM)

OriginID: OOF-OID-ASGA-ACPS-GCM-2026-07-08-0004
Architecture Ecosystem: Structured Reality Standards™
Architecture Family: Autonomous Systems Governance Architecture (ASGA™)
Operational Layer: Autonomous Operational Governance Layer
Governed Space: Governance Compatibility
Category: Governance & Enforcement
Subcategory: Autonomous Operational Governance
Type: Autonomous Compatibility Standard Module
Parent Standard: Autonomous Compatibility Standard (ACPS)
Version: 1.0
Status: Canonical · Open Module
Origin Date: 8 July 2026
Compatibility: OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Canonical Definition

Governance Compatibility Module (GCM) defines the structural conditions under which autonomous operational systems remain compatible across different governance frameworks, governance policies, operational rules, and decision structures while preserving operational integrity and trustworthy autonomous cooperation.

GCM governs governance compatibility.

The module establishes the governance conditions required to ensure that autonomous operational actors can cooperate even when operating under different governance environments.

Operational compatibility alone is insufficient.

Governance compatibility is also required.

GCM governs that compatibility.

Module Operational Role

GCM defines the governance compatibility layer of ACPS.

Its role is to preserve compatibility between autonomous systems operating under different governance models without compromising

Module Operational Space

GCM governs:

- governance compatibility,
 - governance alignment,
 - policy compatibility,
 - operational rule compatibility,
 - governance interoperability,
 - cross-governance cooperation,
 - governed operational alignment,
 - governance consistency.
-

Module Function

The module applies wherever autonomous operational systems interact across organizations, jurisdictions, governance models, or operational policies.

Minimum Implementation Framework

1. Define the Governance Compatibility Object

Identify which governance environments require compatibility.

2. Define Compatibility Conditions

Establish governance conditions governing policy alignment, operational rule compatibility, and governance interoperability.

3. Define Compatibility Failure Logic

Identify conditions where governance rules become conflicting, incompatible, inconsistent, or governance-invalid.

4. Define Governance Response

Define governance actions for policy alignment, governance adaptation, compatibility validation, escalation, or operational restriction.

5. Preserve Compatibility Traceability

Preserve governance mappings, compatibility assessments, operational evidence, governance decisions, and supporting documentation.

Use Case 1 — Cross-Border Autonomous Freight Network

Scenario

Autonomous freight vehicles operate across multiple countries with different regulatory and governance requirements.

Application

GCM governs compatibility between different governance environments before autonomous operations continue across jurisdictions.

Result

Cross-border autonomous operations remain compliant, coordinated, and operationally trustworthy.

Use Case 2 — Multi-Organization Industrial Ecosystem

Scenario

Several organizations deploy autonomous systems using different internal governance policies while collaborating on a shared industrial operation.

Application

GCM aligns governance requirements to enable safe and governed autonomous cooperation.

Result

The participating organizations maintain compatible governance while preserving operational integrity and collaborative efficiency.

Canonical Closing Statement

Governable interoperability requires governable governance compatibility. Governance Compatibility ensures that autonomous operational systems cooperate safely and consistently across different governance environments while preserving operational integrity and trustworthy autonomous collaboration.
