

Operational Accountability Evidence Module (OAEM)

OriginID: OOF-OID-ASGA-AOAS-OAEM-2026-07-08-0003
Architecture Ecosystem: Structured Reality Standards™
Architecture Family: Autonomous Systems Governance Architecture (ASGA™)
Operational Layer: Autonomous Operational Governance Layer
Governed Space: Operational Accountability Evidence
Category: Governance & Enforcement
Subcategory: Autonomous Operational Governance
Type: Autonomous Operational Accountability Standard Module
Parent Standard: Autonomous Operational Accountability Standard (AOAS)
Version: 1.0
Status: Canonical · Open Module
Origin Date: 8 July 2026
Compatibility: OOF Methodology OS · GOA™ · ORA™ · AGA™ · AIG® · CLIA® · MGIA™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Canonical Definition

Operational Accountability Evidence Module (OAEM) defines the structural conditions under which evidence supporting accountability for autonomous operations is created, preserved, verified, and governed throughout the complete autonomous operational lifecycle.

OAEM governs operational accountability evidence.

The module establishes the governance conditions required to ensure that accountability remains supported by reliable, verifiable, and traceable operational evidence.

Accountability requires attribution.

Governance requires evidence.

OAEM governs that evidence.

Module Operational Role

OAEM defines the accountability evidence layer of AOAS.

Its role is to preserve sufficient operational evidence to justify, verify, and demonstrate accountability for autonomous operations.

Module Operational Space

OAEM governs:

- operational accountability evidence,
- accountability records,
- evidence preservation,
- governance evidence,
- operational proof,
- evidence verification,
- accountable operational documentation,
- evidence traceability.

Module Function

The module applies wherever organizations must preserve verifiable evidence supporting accountability for autonomous operational decisions, actions, and outcomes.

Minimum Implementation Framework

1. Define the Accountability Evidence Object

Identify which operational evidence must be preserved to support accountability.

2. Define Evidence Conditions

Establish governance conditions governing evidence creation, preservation, verification, and availability.

3. Define Evidence Failure Logic

Identify conditions where evidence becomes incomplete, unavailable, inconsistent, altered, or governance-invalid.

4. Define Governance Response

Define governance actions for evidence preservation, verification, recovery, investigation, or governance review.

5. Preserve Evidence Traceability

Preserve evidence records, governance decisions, operational history, verification activities, and supporting documentation.

Use Case 1 — Autonomous Medical Robot

Scenario

An autonomous surgical assistant completes a complex medical

procedure requiring post-operation review.

Application

OAEM preserves operational logs, governance decisions, intervention history, and execution records supporting accountability.

Result

The healthcare organization can demonstrate complete operational accountability through verifiable evidence.

Use Case 2 — Autonomous Financial Processing Platform

Scenario

An autonomous AI platform performs high-value financial transaction approvals.

Application

OAEM preserves evidence supporting every autonomous operational decision and governance approval.

Result

The organization maintains complete accountability supported by transparent, auditable, and verifiable operational evidence.

Canonical Closing Statement

Governable accountability requires governable evidence. Operational Accountability Evidence ensures that responsibility for autonomous operations remains continuously supported by reliable, traceable, and verifiable evidence throughout the complete operational lifecycle.
