

ADIT® Complete Standards & Modules Index

Continuous Audit & Evidence Governance Architecture — Audit & Evidence Governance Layer

Official Continuous Audit & Evidence Governance Architecture Map for AI Systems, Autonomous Systems, Digital Assets, Organizations, Critical Infrastructure, and Future Operational Environments

This document serves as the official OOF® audit and evidence governance architecture map and structural index used for audit governance design, audit governance navigation, audit governance classification, evidence governance, audit diagnostics, audit architecture development, audit governance validation, and audit interoperability across AI systems, autonomous systems, organizations, digital assets, critical infrastructure, and future operational environments.

ADIT® consists of 10 Parent Standards and 50 Core Modules.

Additional standards and modules may be added when new governable audit and evidence spaces are identified. However, the standards and modules listed below form the core structural backbone of ADIT®.

1. Audit Observation Standard (AOS)

Governed Space: Audit Observation

Core Question: How can operational reality be continuously observed for trustworthy audit?

Modules:

- AOEM — Audit Observation Event Module
 - AOCM — Audit Observation Context Module
 - AOAM — Audit Observation Attribution Module
 - AOBM — Audit Observation Boundary Module
 - AOVM — Audit Observation Validation Module
-

2. Evidence Formation Standard (EFS)

Governed Space: Evidence Formation

Core Question: How does operational reality become governed audit evidence?

Modules:

- EFCM — Evidence Capture Module
 - EFAM — Evidence Attribution Module
-

- EFSCM — Evidence Source Context Module
 - EFTM — Evidence Temporal Anchoring Module
 - EFCLM — Evidence Classification Module
-

3. Evidence Integrity Standard (EIS)

Governed Space: Evidence Integrity

Core Question: How can audit evidence preserve its integrity throughout the complete audit lifecycle?

Modules:

- EICM — Evidence Completeness Module
 - EICNM — Evidence Continuity Module
 - EIAM — Evidence Authenticity Module
 - EICTM — Evidence Change Traceability Module
 - EICXM — Evidence Context Integrity Module
-

4. Evidence Correlation Standard (ECS)

Governed Space: Evidence Correlation

Core Question: How are individual evidence objects connected into a coherent audit reality?

Modules:

- ECLM — Evidence Linkage Module
 - ECRM — Evidence Relationship Module
 - ECTM — Evidence Timeline Module
 - ECCM — Evidence Causality Correlation Module
 - ECNM — Evidence Network Module
-

5. Evidence Verification Standard (EVS)

Governed Space: Evidence Verification

Core Question: How can audit evidence be objectively and independently verified before audit use?

Modules:

- EVAM — Evidence Authenticity Verification Module
 - EVSVM — Evidence Source Verification Module
 - EVIVM — Evidence Integrity Verification Module
 - EVCVM — Evidence Context Verification Module
 - EVRM — Evidence Verification Review Module
-

6. Audit Execution Standard (AES)

Governed Space: Audit Execution

Core Question: How should governed audits be performed in a consistent, objective, and independently verifiable manner?

Modules:

- AEPM — Audit Planning Module
 - AEPRM — Audit Procedure Module
 - AEDM — Audit Documentation Module
 - AETM — Audit Traceability Module
 - AECM — Audit Consistency Module
-

7. Audit Findings Standard (AFS)

Governed Space: Audit Findings

Core Question: How can objective audit findings be established from verified evidence?

Modules:

- FIM — Finding Identification Module
 - FCM — Finding Classification Module
 - FVM — Finding Validation Module
 - FDM — Finding Documentation Module
 - FPM — Finding Prioritization Module
-

8. Audit Response Standard (ARS)

Governed Space: Audit Response

Core Question: How should validated audit findings be transformed into governed organizational responses?

Modules:

- RPM — Response Planning Module
 - RAM — Response Approval Module
 - RIM — Response Implementation Module
 - RMM — Response Monitoring Module
 - RVM — Response Verification Module
-

9. Audit Preservation Standard (APS)

Governed Space: Audit Preservation

Core Question: How can audit history remain preserved, accessible, trustworthy, and reconstructable throughout its complete lifecycle?

Modules:

- ARPM — Audit Record Preservation Module
- ARTM — Audit Retention Module
- AAM — Audit Archive Module
- ARM — Audit Retrieval Module
- APVM — Audit Preservation Verification Module

10. Audit Assurance Standard (AAS)

Governed Space: Audit Assurance

Core Question: How can the complete audit lifecycle remain continuously trustworthy, objective, independent, complete, and independently verifiable?

Modules:

- AQM — Audit Quality Module
- AIM — Audit Independence Module
- ACM — Audit Completeness Module
- AAVM — Audit Assurance Verification Module
- AARM — Audit Assurance Review Module

ADIT® Architecture Summary

Parent Standards: 10

Core Modules: 50

Core Governed Audit & Evidence Spaces

Audit Observation Evidence Formation Evidence Integrity Evidence Correlation
Evidence Verification Audit Execution Audit Findings Audit Response Audit
Preservation Audit Assurance

ADIT® Navigation Layer Core Questions Map

AOS → How can operational reality be continuously observed for trustworthy audit?

EFS → How does operational reality become governed audit evidence?

EIS → How can audit evidence preserve its integrity throughout the complete audit lifecycle?

ECS → How are individual evidence objects connected into a coherent audit reality?

EVS → How can audit evidence be objectively and independently verified before audit use?

AES → How should governed audits be performed in a consistent, objective, and independently verifiable manner?

AFS → How can objective audit findings be established from verified evidence?

ARS → How should validated audit findings be transformed into governed organizational responses?

APS → How can audit history remain preserved, accessible, trustworthy, and reconstructable throughout its complete lifecycle?

AAS → How can the complete audit lifecycle remain continuously trustworthy, objective, independent, complete, and independently verifiable?

Architectural Position

ADIT® governs the complete audit and evidence governance lifecycle.

The architecture progresses:

Audit Observation → Evidence Formation → Evidence Integrity → Evidence Correlation → Evidence Verification → Audit Execution → Audit Findings → Audit Response → Audit Preservation → Audit Assurance

Together these standards govern how operational reality is continuously observed, transformed into governed evidence, verified, audited, translated into objective findings, acted upon through governed responses, preserved for future reconstruction, and independently assured across AI systems, autonomous systems, organizations, digital assets, critical infrastructure, and future operational environments.

Canonical Principle

ADIT® does not govern operational execution, compliance, certification, or regulatory authority. ADIT® governs the audit and evidence conditions under which operational reality remains continuously observable, objectively evidenced, independently auditable, reconstructable, preserved, and continuously assured throughout its complete operational lifecycle.
