

Audit Documentation Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Audit Execution Standard

Operational Layer: Audit Execution Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Audit Documentation

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Audit Documentation

Canonical Definition

Audit Documentation Module defines the governance framework for recording, organizing, maintaining, and preserving all documentation generated during audit execution. It establishes documentation principles, recording requirements, governance controls, documentation validation, and continuous documentation assurance necessary to ensure that every audit activity is completely, accurately, and transparently documented throughout the complete audit lifecycle.

Operational Role

Audit Documentation Module governs the documentation layer of audit execution by ensuring that every audit procedure, observation, decision, and supporting record is accurately documented and preserved.

Minimum Implementation Framework

1. Define Documentation Requirements

Identify documentation standards, required records, governance requirements, documentation responsibilities, retention requirements, and expected documentation outputs.

2. Define Documentation Methodology

Establish standardized procedures for recording audit activities, organizing documentation, maintaining document integrity, and preserving audit records.

3. Define Documentation Validation Logic

Define how audit documentation is evaluated by verifying completeness, accuracy, consistency, traceability, governance conformity, and documentation quality.

4. Define Governance Response

Establish governance actions for missing documentation, incomplete records, documentation inconsistencies, validation failures, and corrective documentation measures.

5. Preserve Documentation Records

Maintain audit documentation, governance approvals, validation history, supporting evidence, timestamps, revisions, and corrective actions throughout the complete audit lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An organization performs a governance audit of autonomous AI systems operating across multiple environments.

Application

Audit Documentation Module governs the recording of audit activities, evidence evaluations, decisions, observations, and governance actions throughout the audit process.

Result

The complete audit remains fully documented, transparent, traceable, and suitable for independent review.

Use Case 2 — Regulatory Audit

Scenario

A regulatory authority conducts a formal audit requiring complete documentation of every audit activity.

Application

Audit Documentation Module governs the creation, validation, organization, and preservation of all audit documentation throughout the engagement.

Result

Regulators obtain complete, trustworthy, and well-structured audit documentation supporting accountability and independent verification.

Canonical Closing Statement

Audit Documentation Module establishes the canonical governance framework for documenting governed audit activities throughout the complete audit lifecycle. By governing documentation standards, recording methodology, governance controls, documentation validation, and continuous documentation assurance, the module enables reliable audit execution, operational reconstruction, accountable governance, and independent verification across all operational domains.
