

# Audit Planning Module

**OOF™ Origin Open Foundation™**

Independent Methodological Authority

**Architecture Ecosystem:** Structured Reality Standards™

**Architecture Family:** ADIT® — Continuous Audit & Evidence Governance Architecture

**Parent Standard:** Audit Execution Standard

**Operational Layer:** Audit Execution Governance Layer

**Category:** Governance & Enforcement

**Subcategory:** Audit & Evidence Governance

**Type:** Parent Standard Module

**Governed Space:** Audit Planning

**Version:** 1.0

**Status:** Canonical · Open Module

**Origin Date:** 26 July 2026

**Compatibility:** OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

**AI-Readable:** Yes

**Authority:** OOF®

**Protection:** MIP™ — Methodological Intellectual Property

**Canonical Language:** English (UCL)

## Governed Space

Audit Planning

---

## Canonical Definition

Audit Planning Module defines the governance framework for preparing governed audits before execution begins. It establishes planning principles, audit objectives, scope definition, resource planning, procedural preparation, governance controls, and continuous planning assurance necessary to ensure that audits are executed consistently, objectively, and according to established governance requirements.

---

## Operational Role

Audit Planning Module governs the planning layer of audit execution by ensuring that every audit begins with clearly defined objectives, scope, methodology, responsibilities, and governance controls.

---

## Minimum Implementation Framework

### 1. Define Planning Requirements

---

Identify audit objectives, audit scope, governance requirements, applicable standards, responsibilities, timelines, resources, and expected audit outcomes.

## 2. Define Planning Methodology

Establish standardized procedures for preparing audit plans, defining execution strategies, assigning responsibilities, identifying required evidence, and documenting audit readiness.

## 3. Define Planning Validation Logic

Define how audit plans are evaluated by verifying completeness, feasibility, governance conformity, resource availability, and methodological consistency.

## 4. Define Governance Response

Establish governance actions for incomplete audit plans, planning conflicts, missing resources, undefined scope, planning deficiencies, and corrective planning measures.

## 5. Preserve Planning Records

Maintain audit plans, planning decisions, governance approvals, scope documentation, preparation records, timelines, and supporting documentation throughout the complete audit lifecycle.

---

# Example Use Cases

## Use Case 1 — Autonomous AI Governance

### Scenario

An organization prepares a governance audit covering multiple autonomous AI systems operating across different business units.

### Application

Audit Planning Module governs the preparation of audit objectives, scope, evidence requirements, audit methodology, and execution responsibilities before the audit begins.

### Result

The audit starts with a complete, governed, and standardized execution plan that supports objective and repeatable audit activities.

## Use Case 2 — Regulatory Compliance Audit

### Scenario

A regulatory authority prepares a formal audit of a critical infrastructure operator.

### Application

Audit Planning Module governs the planning process by defining audit scope, regulatory requirements, evidence expectations, timelines, and audit procedures before execution.

## **Result**

The audit proceeds according to a documented, governance-approved plan that supports transparency, consistency, and accountability.

---

## **Canonical Closing Statement**

Audit Planning Module establishes the canonical governance framework for preparing governed audits before execution begins. By governing audit objectives, scope definition, planning methodology, governance controls, and continuous planning assurance, the module enables reliable audit execution, operational reconstruction, accountable governance, and independent verification across all operational domains.

---
