

Audit Procedure Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Audit Execution Standard

Operational Layer: Audit Execution Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Audit Procedures

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Audit Procedures

Canonical Definition

Audit Procedure Module defines the governance framework for establishing, executing, validating, and continuously governing standardized audit procedures. It establishes procedural principles, execution requirements, verification controls, governance mechanisms, and continuous procedural assurance necessary to ensure that audit activities are performed consistently, objectively, transparently, and repeatably throughout the complete audit lifecycle.

Operational Role

Audit Procedure Module governs the procedural layer of audit execution by ensuring that every audit activity follows standardized, documented, and governable procedures.

Minimum Implementation Framework

1. Define Procedure Requirements

Identify required audit procedures, governance objectives, execution requirements, responsibilities, procedural controls, and expected audit outcomes.

2. Define Procedure Methodology

Establish standardized procedures for performing audit activities, documenting execution, validating procedural compliance, and maintaining methodological consistency.

3. Define Procedure Validation Logic

Define how audit procedures are evaluated by verifying procedural compliance, execution consistency, governance conformity, completeness, and methodological accuracy.

4. Define Governance Response

Establish governance actions for procedural deviations, incomplete execution, procedural conflicts, validation failures, non-conformities, and corrective measures.

5. Preserve Procedure Records

Maintain procedure documentation, execution history, governance decisions, validation records, timestamps, corrective actions, and supporting documentation throughout the complete audit lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An organization executes a governance audit of multiple autonomous AI systems using standardized audit procedures.

Application

Audit Procedure Module governs every audit activity to ensure consistent execution, objective evidence evaluation, and full procedural compliance.

Result

The audit is executed using repeatable and standardized procedures that support reliable governance outcomes.

Use Case 2 — Financial Audit

Scenario

An external audit firm performs a financial audit using predefined audit procedures.

Application

Audit Procedure Module governs the execution of each audit procedure, ensuring methodological consistency, documentation quality, and governance compliance.

Result

Audit activities remain transparent, repeatable, and independently verifiable throughout the engagement.

Canonical Closing Statement

Audit Procedure Module establishes the canonical governance framework for executing standardized audit procedures throughout the complete audit lifecycle. By governing procedural execution, methodological consistency, governance controls, validation, and continuous procedural assurance, the module enables reliable audit execution, operational reconstruction, accountable governance, and independent verification across all operational domains.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property
