

Audit Independence Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Audit Assurance Standard

Operational Layer: Audit Assurance Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Audit Independence

Version: 1.0

Status: Canonical · Open Module

Origin Date: 31 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Audit Independence

Canonical Definition

Audit Independence Module defines the governance framework for preserving, evaluating, and continuously verifying the independence of the audit process throughout its complete lifecycle. It establishes independence principles, governance controls, conflict-of-interest management, independence validation, and continuous independence assurance necessary to ensure that audit conclusions remain objective, unbiased, free from inappropriate influence, and independently trustworthy.

Operational Role

Audit Independence Module governs the independence layer of audit assurance by ensuring that audit planning, evidence evaluation, findings, responses, and assurance activities remain free from conflicts of interest and improper influence.

Minimum Implementation Framework

1. Define Independence Requirements

Establish independence principles, governance expectations, conflict-of-interest criteria, role separation requirements, responsible authorities, and acceptance conditions.

2. Define Independence Methodology

Develop standardized procedures for evaluating auditor independence, identifying potential conflicts, documenting independence declarations, and maintaining governance integrity.

3. Define Independence Validation Logic

Verify that audit activities remain objective, governance-compliant, free from inappropriate influence, and consistent with established independence requirements.

4. Define Governance Response

Establish procedures for conflicts of interest, compromised independence, governance exceptions, reassignment, escalation, corrective actions, and independent review.

5. Preserve Independence Records

Maintain independence declarations, conflict assessments, governance decisions, validation reports, approvals, timestamps, and audit trails throughout the assurance lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An organization appoints an independent assurance team to review audits of autonomous AI systems.

Application

Audit Independence Module governs independence verification, conflict-of-interest assessment, role separation, and governance oversight before assurance activities begin.

Result

Audit assurance remains objective, transparent, and trusted by stakeholders because independence is continuously demonstrated.

Use Case 2 — Financial Regulatory Audit

Scenario

A financial regulator evaluates whether external auditors remained independent

throughout a statutory audit.

Application

Audit Independence Module governs the review of auditor relationships, conflicts of interest, governance controls, and independence evidence.

Result

The audit process remains demonstrably independent, strengthening confidence in audit conclusions and regulatory oversight.

Canonical Closing Statement

Audit Independence Module establishes the canonical governance framework for preserving and verifying audit independence throughout the complete audit lifecycle. By governing independence methodology, conflict-of-interest management, governance controls, validation, and continuous independence assurance, the module enables objective audits, accountable governance, operational trust, and independent verification across all operational domains.
