

Audit Retrieval Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Audit Preservation Standard

Operational Layer: Audit Preservation Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Audit Retrieval

Version: 1.0

Status: Canonical · Open Module

Origin Date: 31 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Audit Retrieval

Canonical Definition

Audit Retrieval Module defines the governance framework for retrieving preserved audit evidence, records, findings, responses, approvals, and supporting governance documentation throughout their complete lifecycle. It establishes retrieval methodology, access controls, governance mechanisms, validation requirements, and continuous retrieval assurance necessary to ensure that preserved audit information remains accessible, traceable, complete, and independently verifiable whenever authorized retrieval is required.

Operational Role

Audit Retrieval Module governs the retrieval layer of audit preservation by ensuring that preserved audit information can be efficiently located, accessed, validated, and reconstructed without compromising governance integrity or audit traceability.

Minimum Implementation Framework

1. Define Retrieval Requirements

Establish retrieval objectives, access conditions, governance requirements, authorization rules, responsible authorities, and retrieval performance criteria.

2. Define Retrieval Methodology

Develop standardized procedures for locating, accessing, validating, documenting, and delivering preserved audit information while maintaining governance controls.

3. Define Retrieval Validation Logic

Verify that retrieved audit information is complete, authentic, traceable, governance-compliant, and corresponds to the requested audit scope.

4. Define Governance Response

Establish procedures for retrieval failures, unauthorized access attempts, incomplete retrieval, governance exceptions, inaccessible records, and corrective actions.

5. Preserve Retrieval Records

Maintain retrieval requests, authorization records, access history, validation results, timestamps, governance decisions, and audit trails throughout the complete preservation lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An organization requests historical audit information relating to an autonomous AI decision made several years earlier.

Application

Audit Retrieval Module governs the authorized retrieval, validation, and delivery of preserved audit evidence, findings, and governance records.

Result

Historical audit information is retrieved completely, securely, and with full traceability for governance review and operational reconstruction.

Use Case 2 — Regulatory Investigation

Scenario

A regulatory authority requests archived audit records during a formal investigation.

Application

Audit Retrieval Module governs the retrieval process by validating authorization, ensuring record completeness, documenting access, and preserving governance traceability.

Result

Preserved audit information is delivered accurately, transparently, and in a manner suitable for independent regulatory and legal review.

Canonical Closing Statement

Audit Retrieval Module establishes the canonical governance framework for retrieving preserved audit information throughout its complete lifecycle. By governing retrieval methodology, authorization controls, validation procedures, governance oversight, and continuous retrieval assurance, the module enables long-term audit accessibility, operational reconstruction, accountable governance, and independent verification across all operational domains.

OOF® MIP® Protection Notice
