

Audit Findings Standard

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-ADIT-AFS-2026-07-26-0007

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Operational Layer: Audit Findings Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard

Governed Space: Audit Findings

Version: 1.0

Status: Canonical · Open Standard

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Audit Findings

Core Question

How can audit conclusions be objectively established, documented, classified, and governed based exclusively on verified evidence and governed audit execution?

Canonical Definition

Audit Findings Standard defines the governance conditions required to establish, validate, document, classify, and preserve audit findings produced through governed audit execution. It establishes finding principles, finding methodology, classification requirements, governance controls, validation mechanisms, and continuous findings assurance necessary to ensure that audit findings remain objective, evidence-based, transparent, repeatable, and independently verifiable throughout the complete lifecycle of a governed entity.

Governance Flow Position

Audit Observation → Evidence Formation → Evidence Integrity → Evidence Correlation → Evidence Verification → Audit Execution → Audit Findings → Audit Response → Audit Preservation → Audit Assurance

Standard Abstract

A completed audit does not automatically produce governed findings.

Audit findings must be objectively derived from verified evidence using standardized methodology, documented reasoning, and governed evaluation criteria.

Audit Findings Standard establishes the canonical methodology for transforming governed audit execution into objective, evidence-supported audit conclusions before organizational responses begin.

Operational Role

Audit Findings Standard governs the findings layer of audit governance by establishing standardized methods for identifying, documenting, classifying, validating, and preserving audit findings generated through governed audit execution.

Operational Space

Audit Findings Standard governs:

- audit findings
 - finding classification
 - finding validation
 - finding documentation
 - finding prioritization
 - finding governance
 - findings assurance.
-

Why This Standard Exists

Audit execution must produce findings that are objective, reproducible, and supported by verified evidence.

Without standardized governance, audit findings may become subjective, inconsistent, or insufficiently supported.

Audit Findings Standard exists because Audit Findings represents the seventh governed space of ADIT® — Continuous Audit & Evidence Governance Architecture™, providing the formal methodology for producing governed audit conclusions before audit responses are initiated.

Scope

This standard may be applied across:

- AI systems
- autonomous systems
- cybersecurity
- digital forensics
- financial auditing
- healthcare
- industrial operations
- regulatory compliance
- critical infrastructure
- digital identities
- operational governance
- and any governed environment requiring standardized audit findings.

Relationship to Other OOF® Architectures

Audit Findings Standard interoperates with:

- GOA™
- OBIDENTITY®
- INTEGROS®
- ORA™
- AGA™
- AIG®
- CLIA®
- MGIA™
- ASGA™
- RIS™

by providing the canonical methodology for producing objective audit findings based on governed audit execution.

Foundational Principle

Every audit finding must be objectively supported by verified evidence and governed audit execution.

Canonical Closing Statement

Audit Findings Standard establishes the canonical governance framework for producing objective, evidence-based audit findings. By governing finding identification, classification, validation, documentation, and continuous findings assurance, the standard enables reliable audit conclusions, operational reconstruction, accountable governance, and independent verification across all operational domains.
