

Evidence Relationship Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Evidence Correlation Standard

Operational Layer: Evidence Correlation Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Evidence Relationships

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Evidence Relationships

Canonical Definition

Evidence Relationship Module defines the governance framework for establishing, validating, managing, and preserving governed relationships between individual evidence objects. It establishes relationship principles, association rules, dependency structures, governance controls, and continuous relationship assurance necessary to ensure that evidence is connected accurately, consistently, and objectively throughout the complete lifecycle of a governed entity.

Operational Role

Evidence Relationship Module governs the relationship layer of evidence correlation by ensuring that every evidence object is connected to other relevant evidence through governed, verifiable, and meaningful relationships.

Minimum Implementation Framework

1. Define Relationship Requirements

Identify the relationship types, dependency rules, contextual requirements, governance objectives, and operational conditions necessary for connecting evidence.

2. Define Relationship Methodology

Establish standardized procedures for creating, documenting, validating, maintaining, and governing evidence relationships throughout the evidence lifecycle.

3. Define Relationship Validation Logic

Define how evidence relationships are evaluated by verifying their correctness, consistency, relevance, completeness, and governance compliance.

4. Define Governance Response

Establish governance actions for invalid relationships, missing links, conflicting associations, broken dependencies, and corrective relationship management.

5. Preserve Relationship Records

Maintain relationship history, dependency mappings, validation records, governance decisions, timestamps, and supporting documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

Multiple autonomous AI agents generate separate evidence while collaborating on a complex operational process.

Application

Evidence Relationship Module governs how every evidence object is connected through validated operational relationships, dependencies, and contextual associations.

Result

The complete operational process can be reconstructed using governed evidence relationships without compromising evidence integrity.

Use Case 2 — Digital Investigation

Scenario

Investigators analyze evidence collected from multiple devices, systems, and operational environments.

Application

Evidence Relationship Module governs how all evidence objects are linked into a coherent evidence network based on validated relationships.

Result

Investigators obtain a trustworthy evidence graph that accurately represents operational reality and supports audit, investigation, and legal review.

Canonical Closing Statement

Evidence Relationship Module establishes the canonical governance framework for governing relationships between independently managed evidence objects throughout their complete lifecycle. By governing evidence associations, dependency structures, relationship validation, and continuous relationship assurance, the module enables reliable operational reconstruction, accountable governance, independent verification, and trustworthy audit across all operational domains.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property
