

Evidence Dependency Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Evidence Correlation Standard

Operational Layer: Evidence Correlation Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Evidence Dependencies

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Evidence Dependencies

Canonical Definition

Evidence Dependency Module defines the governance framework for identifying, validating, managing, and preserving dependency relationships between governed evidence objects. It establishes dependency principles, dependency validation rules, governance controls, dependency mapping mechanisms, and continuous dependency assurance necessary to ensure that operational relationships between evidence remain accurate, complete, and governable throughout the complete lifecycle of a governed entity.

Operational Role

Evidence Dependency Module governs the dependency layer of evidence correlation by ensuring that operational, logical, causal, and structural dependencies between evidence objects are accurately identified, validated, and continuously maintained.

Minimum Implementation Framework

1. Define Dependency Requirements

Identify dependency types, operational relationships, causal requirements, governance objectives, and dependency conditions required for evidence correlation.

2. Define Dependency Methodology

Establish standardized procedures for identifying, documenting, validating, maintaining, and governing dependencies between evidence objects.

3. Define Dependency Validation Logic

Define how evidence dependencies are evaluated by verifying operational relationships, dependency completeness, logical consistency, causal accuracy, and governance compliance.

4. Define Governance Response

Establish governance actions for missing dependencies, invalid relationships, broken dependency chains, dependency conflicts, validation failures, and corrective measures.

5. Preserve Dependency Records

Maintain dependency maps, validation history, governance decisions, corrective actions, timestamps, and supporting documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI ecosystem generates evidence across multiple coordinated services where later decisions depend on earlier operational outcomes.

Application

Evidence Dependency Module governs the identification and validation of dependency relationships between all relevant evidence objects.

Result

Organizations can accurately understand how operational events influenced one another throughout the complete execution lifecycle.

Use Case 2 — Financial Investigation

Scenario

Auditors investigate a complex financial process involving approvals, transactions, authorizations, and settlement activities.

Application

Evidence Dependency Module governs dependency mapping between every related evidence object to reconstruct operational dependencies and causal relationships.

Result

Auditors obtain a complete dependency model supporting reliable investigation, accountability, and independent verification.

Canonical Closing Statement

Evidence Dependency Module establishes the canonical governance framework for governing dependency relationships between governed evidence throughout the complete lifecycle. By governing dependency identification, dependency validation, dependency mapping, and continuous dependency assurance, the module enables reliable operational reconstruction, accountable governance, independent verification, and trustworthy audit across all operational domains.

OOF® MIP® Protection Notice
