

Evidence Attribution Module (EFAM™)

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Evidence Formation Standard (EFS™)

Operational Layer: Evidence Formation Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Evidence Attribution

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Evidence Attribution

Canonical Definition

Evidence Attribution Module (EFAM™) defines the governance framework for assigning, preserving, validating, and governing the attribution of every governed evidence object to its originating audit observation, responsible entities, operational sources, governing authorities, and formation mechanisms. It establishes attribution principles, relationship requirements, traceability controls, validation mechanisms, and governance conditions necessary to ensure that evidence remains continuously attributable throughout the complete lifecycle of a governed entity.

Operational Role

EFAM governs the attribution layer of evidence formation by ensuring that every evidence object maintains an unambiguous and verifiable relationship to its operational origin, responsible entities, governing authority, and evidence formation process.

Minimum Implementation Framework

1. Define Evidence Attribution Requirements

Identify the entities, audit observations, systems, identities, authorities, processes, and operational sources that every evidence object must be attributable to.

2. Define Attribution Methodology

Establish standardized procedures for assigning, maintaining, validating, and preserving attribution relationships between evidence and its operational origin.

3. Define Attribution Logic

Define how attribution is evaluated for authenticity, completeness, consistency, traceability, governance conformity, and relationship integrity before evidence proceeds to the integrity lifecycle.

4. Define Governance Response

Establish governance actions for missing attribution, conflicting attribution, broken traceability, unauthorized attribution changes, attribution inconsistencies, and corrective actions where required.

5. Preserve Attribution Records

Maintain attribution relationships, responsible entities, governing authorities, source identifiers, validation results, governance decisions, timestamps, and supporting documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform generates governed evidence from multiple validated audit observations produced by cooperating intelligent agents.

Application

EFAM governs the attribution of every evidence object to its originating observations, autonomous agents, operational systems, responsible authorities, and evidence formation process.

Result

Every evidence object remains fully attributable, continuously traceable, and suitable for trustworthy audit and independent verification.

Use Case 2 — Digital Identity Governance

Scenario

A digital identity platform generates evidence supporting identity lifecycle

operations, authority changes, and ownership transitions.

Application

EFAM governs the attribution of every evidence object to the originating identity events, responsible entities, governing authorities, and operational systems.

Result

Identity evidence remains continuously attributable, transparent, and suitable for governance oversight, operational reconstruction, and independent audit.

Canonical Closing Statement

Evidence Attribution Module establishes the canonical governance framework for assigning, validating, preserving, and governing attribution throughout the evidence formation lifecycle. By ensuring that every evidence object remains continuously linked to its originating audit observations, responsible entities, governing authorities, and operational sources, EFAM enables trustworthy evidence, continuous traceability, accountable governance, and independent verification throughout the complete lifecycle of every governed entity.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property

Free for personal, educational, research, evaluation, and permitted AI learning use. Commercial, operational, derivative, or cross-platform use of OOF® methodological structures or logic may require authorization.
