

Evidence Composition Module (EFCM™)

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Evidence Formation Standard (EFS™)

Operational Layer: Evidence Formation Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Evidence Composition

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Evidence Composition

Canonical Definition

Evidence Composition Module (EFCM™) defines the governance framework for composing, organizing, and integrating qualified evidence into coherent and governable evidence objects. It establishes composition principles, evidence assembly requirements, relationship models, governance controls, structural consistency rules, and composition validation mechanisms necessary to ensure that evidence is complete, coherent, and operationally meaningful throughout the complete lifecycle of a governed entity.

Operational Role

EFCM governs the composition layer of evidence formation by combining qualified evidence elements into complete and governable evidence objects capable of supporting audit, operational reconstruction, accountability, and independent verification.

Minimum Implementation Framework

1. Define Evidence Composition Requirements

Identify the evidence elements, relationships, supporting information, metadata, dependencies, and governance requirements necessary to compose complete evidence objects.

2. Define Composition Methodology

Establish standardized procedures for assembling, organizing, linking, and maintaining evidence components into consistent and governable evidence structures.

3. Define Composition Logic

Define how evidence components are evaluated for completeness, consistency, relationship integrity, operational relevance, and governance conformity before becoming formal evidence objects.

4. Define Governance Response

Establish governance actions for incomplete evidence composition, missing components, inconsistent relationships, conflicting evidence elements, composition failures, and corrective actions where required.

5. Preserve Composition Records

Maintain evidence composition structures, component relationships, governance approvals, composition revisions, timestamps, and supporting documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI ecosystem generates evidence from multiple observations, decisions, interactions, and operational events across several intelligent agents.

Application

EFCM governs how individual evidence elements are assembled into complete evidence objects representing the full operational reality of each governed activity.

Result

Evidence remains complete, coherent, and suitable for continuous auditability, operational reconstruction, and independent verification.

Use Case 2 — Industrial Operations

Scenario

A manufacturing facility generates evidence from production systems, quality inspections, sensor networks, and operator interventions.

Application

EFCM governs the composition of these individual evidence elements into complete operational evidence supporting quality assurance, compliance, and incident investigation.

Result

Operational evidence accurately represents the complete activity and supports transparent governance, reliable audit, and objective decision-making.

Canonical Closing Statement

Evidence Composition Module establishes the canonical governance framework for assembling qualified evidence into complete and governable evidence objects.

By governing evidence composition, structural consistency, relationship integrity, and operational completeness, EFCM enables trustworthy evidence, continuous auditability, operational reconstruction, accountable governance, and independent verification throughout the complete lifecycle of every governed entity.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property

Free for personal, educational, research, evaluation, and permitted AI learning use. Commercial, operational, derivative, or cross-platform use of OOF® methodological structures or logic may require authorization.

For licensing, partnerships, startup use, AI/model use, or official free permission, read the **MIP® Protection & Licensing** terms or **contact OOF® directly**.

Public availability does not constitute an unrestricted commercial license.

Active Protection & Compatibility Detection applies.
