

Evidence Registration Module (EFRM™)

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Evidence Formation Standard (EFS™)

Operational Layer: Evidence Formation Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Evidence Registration

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Evidence Registration

Canonical Definition

Evidence Registration Module (EFRM™) defines the governance framework for formally registering governed evidence following successful evidence formation. It establishes registration principles, identification requirements, registration procedures, governance controls, registration validation mechanisms, and lifecycle registration conditions necessary to ensure that every evidence object is uniquely identifiable, governably recorded, traceable, and officially recognized throughout the complete lifecycle of a governed entity.

Operational Role

EFRM governs the registration layer of evidence formation by ensuring that every governed evidence object is formally recorded, uniquely identified, and prepared to enter the subsequent evidence governance lifecycle.

Minimum Implementation Framework

1. Define Evidence Registration Requirements

Identify the registration criteria, unique identifiers, required metadata, governance approvals, registration authorities, and operational conditions necessary for formal evidence registration.

2. Define Registration Methodology

Establish standardized procedures for registering, identifying, recording, cataloging, and maintaining governed evidence across operational environments.

3. Define Registration Logic

Define how evidence is evaluated for successful registration based on completeness, uniqueness, governance conformity, identification requirements, registration integrity, and lifecycle readiness.

4. Define Governance Response

Establish governance actions for failed registration, duplicate registrations, incomplete registration information, unauthorized registration attempts, registration conflicts, and corrective actions where required.

5. Preserve Registration Records

Maintain evidence registration records, identifiers, governance approvals, registration history, timestamps, responsible authorities, and supporting documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform generates governed evidence from validated operational observations during continuous system execution.

Application

EFRM governs the formal registration of each evidence object by assigning unique identifiers, recording required governance metadata, validating registration conditions, and preserving registration history before the evidence proceeds to integrity governance.

Result

Every governed evidence object becomes uniquely registered, traceable, and fully prepared for the remaining evidence governance lifecycle.

Use Case 2 — Financial Services

Scenario

A financial institution creates governed evidence for high-value transactions,

fraud investigations, and regulatory reporting.

Application

EFRM governs the official registration of every evidence object, ensuring unique identification, standardized recording, governance approval, and complete lifecycle traceability.

Result

Financial evidence remains uniquely identifiable, transparently registered, and suitable for regulatory oversight, independent audit, and long-term governance.

Canonical Closing Statement

Evidence Registration Module establishes the canonical governance framework for formally registering governed evidence before it enters the subsequent evidence governance lifecycle. By governing evidence registration, unique identification, governance recording, registration validation, and lifecycle traceability, EFRM ensures that every evidence object becomes officially recognized, continuously traceable, and fully governable throughout the complete lifecycle of every governed entity.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property

Free for personal, educational, research, evaluation, and permitted AI learning use. Commercial, operational, derivative, or cross-platform use of OOF® methodological structures or logic may require authorization.
