

Evidence Authenticity Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Evidence Integrity Standard

Operational Layer: Evidence Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Evidence Authenticity

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Evidence Authenticity

Canonical Definition

Evidence Authenticity Module defines the governance framework for establishing, validating, preserving, and continuously demonstrating that governed evidence is genuine, originates from its declared operational source, and has not been falsified, substituted, fabricated, or fraudulently represented. It establishes authenticity principles, origin validation requirements, authenticity controls, governance mechanisms, and continuous validation conditions necessary to preserve trustworthy evidence throughout the complete lifecycle of a governed entity.

Operational Role

Evidence Authenticity Module governs the authenticity layer of evidence integrity by ensuring that every governed evidence object can be objectively demonstrated to be genuine and originate from its declared source.

Minimum Implementation Framework

1. Define Evidence Authenticity Requirements

Identify authenticity requirements, origin criteria, source validation rules, governance objectives, responsible authorities, and operational conditions required to establish authentic evidence.

2. Define Authenticity Methodology

Establish standardized procedures for validating evidence origin, confirming authenticity, documenting provenance, preserving authenticity indicators, and maintaining authenticity throughout the evidence lifecycle.

3. Define Authenticity Logic

Define how evidence authenticity is evaluated based on origin, provenance, source identity, operational consistency, governance conformity, and authenticity validation requirements.

4. Define Governance Response

Establish governance actions for suspected falsification, disputed origin, authenticity failures, substituted evidence, fabricated evidence, authenticity conflicts, and corrective actions where required.

5. Preserve Authenticity Records

Maintain authenticity validations, origin records, provenance information, governance approvals, validation history, timestamps, and supporting documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform generates governed evidence documenting high-value operational decisions across distributed intelligent agents.

Application

Evidence Authenticity Module governs the validation of evidence origin, confirms that every evidence object originates from its declared operational source, and continuously preserves authenticity throughout the evidence lifecycle.

Result

Governed evidence remains demonstrably genuine, objectively trustworthy, and suitable for audit, accountability, and independent verification.

Use Case 2 — Digital Forensics

Scenario

Digital evidence collected following a cybersecurity incident is presented during forensic investigation and legal review.

Application

Evidence Authenticity Module governs the verification of evidence origin and authenticity before the evidence is accepted for forensic analysis and audit.

Result

Every evidence object can be objectively demonstrated as authentic, strengthening confidence in forensic conclusions and governance decisions.

Canonical Closing Statement

Evidence Authenticity Module establishes the canonical governance framework for preserving the authenticity of governed evidence throughout its complete lifecycle. By governing evidence origin, authenticity validation, provenance, and continuous authenticity preservation, the module ensures that governed evidence remains genuine, trustworthy, objectively demonstrable, and suitable for audit, operational reconstruction, accountable governance, and independent verification across all operational domains.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property
