

Evidence Consistency Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Evidence Integrity Standard

Operational Layer: Evidence Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Evidence Consistency

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Evidence Consistency

Canonical Definition

Evidence Consistency Module defines the governance framework for ensuring that governed evidence remains logically, temporally, structurally, and operationally consistent throughout its complete lifecycle. It establishes consistency principles, validation requirements, conflict detection mechanisms, governance controls, and continuous consistency assurance necessary to identify and resolve contradictions, discrepancies, and inconsistencies before evidence is used for audit, investigation, operational reconstruction, or independent verification.

Operational Role

Evidence Consistency Module governs the consistency layer of evidence integrity by ensuring that governed evidence remains coherent, non-contradictory, and operationally reliable across all related evidence records.

Minimum Implementation Framework

1. Define Consistency Requirements

Identify consistency rules, logical relationships, temporal dependencies, structural requirements, and governance conditions required for consistent evidence.

2. Define Consistency Methodology

Establish standardized procedures for evaluating evidence consistency, detecting conflicts, validating relationships, and maintaining coherence across evidence records.

3. Define Consistency Validation Logic

Define how evidence consistency is evaluated by identifying contradictions, conflicting timestamps, incompatible data, broken relationships, missing dependencies, and operational inconsistencies.

4. Define Governance Response

Establish governance actions for detected inconsistencies, conflicting evidence, unresolved contradictions, validation failures, and corrective governance decisions.

5. Preserve Consistency Assurance

Maintain consistency validation history, detected conflicts, governance resolutions, corrective actions, and assurance records throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Operations

Scenario

Multiple autonomous AI agents generate governed evidence describing the same operational process.

Application

Evidence Consistency Module validates that timestamps, operational events, identities, decisions, and evidence relationships remain logically consistent across all generated evidence.

Result

The complete evidence set remains coherent, trustworthy, and suitable for audit and operational reconstruction.

Use Case 2 — Financial Audit

Scenario

An organization submits financial evidence from multiple business systems for

an external audit.

Application

Evidence Consistency Module identifies contradictions between records, validates consistency across systems, and ensures that supporting evidence forms a coherent audit trail.

Result

Auditors receive evidence that is internally consistent, reliable, and suitable for independent verification.

Canonical Closing Statement

Evidence Consistency Module establishes the canonical governance framework for preserving the logical, structural, temporal, and operational consistency of governed evidence throughout its complete lifecycle. By governing evidence coherence, conflict detection, consistency validation, and continuous consistency assurance, the module enables reliable audit, operational reconstruction, accountable governance, and independent verification across all operational domains.

OOF® MIP® Protection Notice
