

Evidence Integrity Validation Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Evidence Integrity Standard

Operational Layer: Evidence Integrity Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Evidence Integrity Validation

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Evidence Integrity Validation

Canonical Definition

Evidence Integrity Validation Module defines the governance framework for continuously validating that governed evidence maintains its required integrity throughout its complete lifecycle. It establishes integrity validation principles, verification requirements, validation controls, governance mechanisms, and continuous assurance conditions necessary to confirm that evidence remains authentic, complete, consistent, protected, and suitable for audit, operational reconstruction, and independent verification.

Operational Role

Evidence Integrity Validation Module governs the continuous validation layer of evidence integrity by verifying that governed evidence satisfies all established integrity requirements before it proceeds to evidence correlation and subsequent audit activities.

Minimum Implementation Framework

1. Define Integrity Validation Requirements

Identify integrity criteria, validation objectives, governance rules, acceptance thresholds, responsible authorities, and operational requirements.

2. Define Validation Methodology

Establish standardized procedures for validating evidence authenticity, completeness, preservation, consistency, protection, and overall integrity.

3. Define Validation Logic

Define how evidence integrity is evaluated using objective validation criteria, integrity controls, governance requirements, and documented validation outcomes.

4. Define Governance Response

Establish governance actions for failed integrity validation, detected integrity violations, unresolved deficiencies, corrective actions, escalation procedures, and revalidation requirements.

5. Preserve Validation Records

Maintain validation history, integrity assessments, governance decisions, corrective actions, approvals, timestamps, and supporting documentation throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

Before governed evidence is used for autonomous operational review, the organization validates that all integrity requirements remain satisfied.

Application

Evidence Integrity Validation Module performs continuous integrity validation, confirming authenticity, completeness, preservation, consistency, and protection before evidence progresses further within ADIT®.

Result

Only evidence with validated integrity is accepted for correlation, audit, and independent verification.

Use Case 2 — Regulatory Audit

Scenario

A regulatory authority requires confirmation that submitted evidence has maintained its integrity throughout the complete retention period.

Application

Evidence Integrity Validation Module verifies compliance with all integrity requirements and documents the validation results before evidence is accepted for regulatory review.

Result

Regulators receive objectively validated evidence with demonstrable integrity suitable for audit and legal proceedings.

Canonical Closing Statement

Evidence Integrity Validation Module establishes the canonical governance framework for continuously validating the integrity of governed evidence throughout its complete lifecycle. By governing integrity verification, validation controls, governance responses, and continuous assurance, the module ensures that only evidence with demonstrably preserved integrity is used for audit, operational reconstruction, accountable governance, and independent verification across all operational domains.

OOF® MIP® Protection Notice
