

Evidence Acceptance Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Evidence Verification Standard

Operational Layer: Evidence Verification Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Evidence Acceptance

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Evidence Acceptance

Canonical Definition

Evidence Acceptance Module defines the governance framework for determining whether verified evidence satisfies all required acceptance criteria before it is approved for audit execution, governance decision-making, regulatory review, legal proceedings, or independent verification. It establishes acceptance principles, decision criteria, approval controls, governance mechanisms, and continuous acceptance assurance necessary to ensure that only evidence meeting all verification requirements is formally accepted.

Operational Role

Evidence Acceptance Module governs the final acceptance layer of evidence verification by determining whether verified evidence is formally approved to proceed into audit execution and subsequent governance activities.

Minimum Implementation Framework

1. Define Acceptance Requirements

Identify acceptance criteria, governance requirements, approval authorities, decision thresholds, and operational conditions necessary for accepting verified evidence.

2. Define Acceptance Methodology

Establish standardized procedures for reviewing verification outcomes, evaluating acceptance criteria, documenting decisions, and governing evidence acceptance.

3. Define Acceptance Validation Logic

Define how evidence acceptance is evaluated by assessing verification results, governance conformity, approval conditions, completeness of validation, and operational readiness.

4. Define Governance Response

Establish governance actions for rejected evidence, conditional acceptance, unresolved verification issues, approval conflicts, appeals, and corrective actions.

5. Preserve Acceptance Records

Maintain acceptance decisions, approval history, governance records, validation documentation, timestamps, supporting evidence, and corrective actions throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform completes evidence verification for a high-impact operational decision before formal audit execution.

Application

Evidence Acceptance Module evaluates whether all verification requirements have been satisfied and formally authorizes the evidence for audit execution.

Result

Only fully verified and governance-approved evidence is accepted into the formal audit process.

Use Case 2 — External Regulatory Audit

Scenario

An external regulatory authority reviews evidence submitted by an organization before initiating a formal compliance audit.

Application

Evidence Acceptance Module governs the formal acceptance decision by verifying that all required evidence satisfies established governance and verification criteria.

Result

The audit proceeds using only evidence that has been objectively verified and formally accepted according to standardized governance rules.

Canonical Closing Statement

Evidence Acceptance Module establishes the canonical governance framework for formally accepting governed evidence after successful verification. By governing acceptance criteria, approval decisions, governance controls, acceptance records, and continuous acceptance assurance, the module ensures that only objectively verified and governance-approved evidence proceeds to audit execution, operational reconstruction, accountable governance, and independent verification across all operational domains.

OOF® MIP® Protection Notice
