

Evidence Corroboration Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Evidence Verification Standard

Operational Layer: Evidence Verification Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Evidence Corroboration

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Evidence Corroboration

Canonical Definition

Evidence Corroboration Module defines the governance framework for confirming governed evidence through independent supporting evidence, sources, observations, records, or validation mechanisms. It establishes corroboration principles, corroboration requirements, verification controls, governance mechanisms, and continuous corroboration assurance necessary to strengthen confidence in governed evidence before audit execution, governance decisions, regulatory review, or independent verification.

Operational Role

Evidence Corroboration Module governs the corroboration layer of evidence verification by ensuring that significant evidence is supported by independent and objectively verifiable confirmation whenever required.

Minimum Implementation Framework

1. Define Corroboration Requirements

Identify which evidence requires corroboration, acceptable corroboration sources, governance objectives, independence requirements, and verification thresholds.

2. Define Corroboration Methodology

Establish standardized procedures for identifying, collecting, documenting, validating, and maintaining corroborating evidence throughout the verification process.

3. Define Corroboration Validation Logic

Define how corroborating evidence is evaluated by assessing independence, consistency, relevance, credibility, and governance conformity.

4. Define Governance Response

Establish governance actions for missing corroboration, conflicting corroborating evidence, unsupported claims, validation failures, and corrective verification measures.

5. Preserve Corroboration Records

Maintain corroboration history, supporting evidence, validation results, governance decisions, timestamps, and corrective actions throughout the complete lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI system produces evidence supporting a high-impact operational decision affecting multiple stakeholders.

Application

Evidence Corroboration Module verifies the decision by requiring independent supporting evidence from additional governed sources before audit execution proceeds.

Result

Critical operational decisions are supported by independently corroborated evidence, increasing governance confidence and audit reliability.

Use Case 2 — Regulatory Investigation

Scenario

A regulatory authority reviews evidence submitted during an investigation involving multiple organizations.

Application

Evidence Corroboration Module requires key evidence to be independently confirmed through additional records, operational logs, or other trusted evidence sources.

Result

Regulatory findings are supported by corroborated evidence capable of withstanding independent scrutiny and legal review.

Canonical Closing Statement

Evidence Corroboration Module establishes the canonical governance framework for independently confirming governed evidence throughout its complete lifecycle. By governing corroboration requirements, independent validation, supporting evidence, governance responses, and continuous corroboration assurance, the module enables reliable audit, operational reconstruction, accountable governance, and independent verification across all operational domains.

OOF® MIP® Protection Notice
