

Evidence Formation Standard (EFS™)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-ADIT-EFS-2026-07-26-0002

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Operational Layer: Evidence Formation Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard

Governed Space: Evidence Formation

Version: 1.0

Status: Canonical · Open Standard

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Evidence Formation

Core Question

How can governed audit observations be transformed into trustworthy evidence suitable for continuous auditability, reconstruction, and independent verification?

Canonical Definition

Evidence Formation Standard (EFS™) defines the governance conditions under which validated audit observations become structured, attributable, authentic, complete, and governable evidence. It establishes evidence formation principles, transformation requirements, evidence qualification criteria, formation mechanisms, governance controls, and acceptance conditions necessary to ensure that evidence is consistently created from governed audit observations throughout the complete lifecycle of a governed entity.

Governance Flow Position

Audit Observation → Evidence Formation → Evidence Integrity → Evidence Correlation → Evidence Verification → Audit Execution → Audit Findings → Audit

Standard Abstract

Evidence does not exist simply because operational information has been captured.

Before information can support audit conclusions, accountability, governance decisions, or independent verification, it must first become governed evidence through a standardized evidence formation process.

Building upon the governed audit observations established by AOS™, Evidence Formation Standard defines how qualified observations become trustworthy evidence capable of supporting the complete audit lifecycle.

EFS transforms governed observations into governed evidence.

Operational Role

Evidence Formation Standard governs the transformation layer between audit observation and evidence. It establishes the governance framework required to create, structure, qualify, document, and approve evidence before it enters the governed evidence lifecycle.

Operational Space

EFS governs:

- evidence formation
- evidence creation
- evidence qualification
- evidence structuring
- evidence composition
- evidence acceptance
- evidence registration.

This governed space ensures that evidence is formed consistently before integrity, correlation, verification, and audit activities begin.

Why This Standard Exists

Audit observations provide visibility into operational reality.

However, observations alone do not automatically constitute trustworthy evidence.

Organizations require a standardized governance framework that determines how governed observations become formal evidence suitable for audit, accountability, operational reconstruction, governance oversight, and independent verification.

EFS exists because Evidence Formation represents the second governed space of

ADIT® — Continuous Audit & Evidence Governance Architecture™, providing the canonical governance framework for transforming governed audit observations into trustworthy evidence.

Scope

This standard may be applied across:

- AI systems
 - autonomous systems
 - organizations
 - digital identities
 - digital assets
 - software systems
 - operational processes
 - governance frameworks
 - cognitive systems
 - critical infrastructure
 - financial systems
 - healthcare systems
 - and any governed entity requiring standardized evidence formation.
-

Relationship to Other OOF® Architectures

EFS governs the evidence formation layer and interoperates with:

- GOA™
- OBIDENITY®
- INTEGROS®
- ORA™
- AGA™
- AIG®
- CLIA®
- MGIA™
- ASGA™
- RIS™

by providing the common governance framework through which governed audit observations become trustworthy evidence across operational domains.

Foundational Principle

Evidence is not collected—it is governably formed from qualified audit observations.

Canonical Closing Statement

Evidence Formation Standard establishes the canonical governance framework for transforming governed audit observations into trustworthy evidence throughout

the complete lifecycle of every governed entity. By defining how observations become structured, attributable, authentic, and governable evidence, EFS enables continuous auditability, operational reconstruction, accountable governance, and independent verification across all operational domains.
