

Evidence Verification Standard

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-ADIT-EVS-2026-07-26-0005

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Operational Layer: Evidence Verification Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard

Governed Space: Evidence Verification

Version: 1.0

Status: Canonical · Open Standard

Origin Date: 26 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Evidence Verification

Core Question

How can correlated evidence be objectively verified before it is accepted for audit findings, governance decisions, or independent review?

Canonical Definition

Evidence Verification Standard defines the governance conditions required to verify the accuracy, validity, reliability, authenticity, completeness, consistency, and sufficiency of correlated evidence before it is used for audit execution. It establishes verification principles, validation requirements, verification controls, governance mechanisms, and continuous verification assurance necessary to determine whether governed evidence satisfies the required level of trust for audit, investigation, operational reconstruction, and independent verification.

Governance Flow Position

Audit Observation → Evidence Formation → Evidence Integrity → Evidence Correlation → Evidence Verification → Audit Execution → Audit Findings → Audit

Standard Abstract

Trustworthy evidence must be verified before it can support audit conclusions or governance decisions.

Even authentic, complete, preserved, and properly correlated evidence requires objective verification to confirm that it satisfies the required governance criteria.

Evidence Verification Standard establishes the methodological framework for determining whether evidence is sufficiently reliable to proceed into formal audit execution.

Operational Role

Evidence Verification Standard governs the verification layer of evidence governance by establishing standardized methods for evaluating whether correlated evidence satisfies defined governance requirements before audit execution begins.

Operational Space

Evidence Verification Standard governs:

- evidence verification
 - evidence validation
 - evidence reliability
 - evidence sufficiency
 - verification methodology
 - verification decisions
 - verification assurance.
-

Why This Standard Exists

Correlated evidence is not automatically accepted as verified evidence.

Organizations require an objective methodology for determining whether evidence is accurate, reliable, complete, and suitable for audit, regulatory review, legal proceedings, and governance decisions.

Evidence Verification Standard exists because Evidence Verification represents the fifth governed space of ADIT® — Continuous Audit & Evidence Governance Architecture™, providing the formal gateway between evidence governance and audit execution.

Scope

This standard may be applied across:

- AI systems
- autonomous systems
- cybersecurity
- digital forensics
- financial auditing
- healthcare
- industrial operations
- regulatory compliance
- critical infrastructure
- digital identities
- operational governance
- and any governed environment requiring objective evidence verification.

Relationship to Other OOF® Architectures

Evidence Verification Standard interoperates with:

- GOA™
- OBIDENTITY®
- INTEGROS®
- ORA™
- AGA™
- AIG®
- CLIA®
- MGIA™
- ASGA™
- RIS™

by providing the canonical methodology for verifying governed evidence before audit execution and governance decision-making.

Foundational Principle

Evidence should be trusted only after it has been objectively verified.

Canonical Closing Statement

Evidence Verification Standard establishes the canonical governance framework for objectively verifying governed evidence before audit execution. By governing evidence verification, validation methodology, reliability assessment, sufficiency evaluation, and continuous verification assurance, the standard enables reliable audit, operational reconstruction, accountable governance, and independent verification across all operational domains.
