

Finding Classification Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Audit Findings Standard

Operational Layer: Audit Findings Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Finding Classification

Version: 1.0

Status: Canonical · Open Module

Origin Date: 30 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Finding Classification

Canonical Definition

Finding Classification Module defines the governance framework for classifying audit findings according to standardized governance criteria, operational significance, severity, priority, impact, and evidence quality. It establishes classification methodology, governance controls, validation mechanisms, and continuous classification assurance necessary to ensure that audit findings are categorized consistently, objectively, and transparently across all governed environments.

Operational Role

Finding Classification Module governs the classification layer of audit findings by ensuring that every identified finding is assigned an objective and standardized classification before validation, reporting, and organizational response.

Minimum Implementation Framework

1. Define Classification Framework

Establish classification categories, severity levels, priority criteria, impact assessment rules, governance thresholds, and responsible authorities.

2. Define Classification Methodology

Develop standardized procedures for evaluating findings according to evidence quality, operational impact, governance significance, and organizational risk.

3. Define Classification Validation Logic

Verify that assigned classifications are evidence-supported, methodologically justified, consistent with governance policies, and independently reproducible.

4. Define Governance Response

Establish procedures for disputed classifications, reclassification requests, inconsistent assessments, governance exceptions, and corrective actions.

5. Preserve Classification Records

Maintain complete records of classifications, supporting evidence, decision rationale, governance approvals, timestamps, revisions, and historical changes throughout the audit lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An audit identifies multiple governance deviations within an autonomous AI system.

Application

Finding Classification Module governs the classification of each finding according to severity, operational impact, governance significance, and verified supporting evidence.

Result

All findings receive objective, consistent, and evidence-based classifications that support governance decisions and prioritization.

Use Case 2 — Regulatory Compliance Audit

Scenario

A regulatory audit identifies several compliance deficiencies across a critical infrastructure operator.

Application

Finding Classification Module governs the standardized categorization of each deficiency using predefined governance criteria and verified audit evidence.

Result

Audit findings are consistently classified, transparently documented, and suitable for regulatory reporting and corrective action planning.

Canonical Closing Statement

Finding Classification Module establishes the canonical governance framework for consistently classifying audit findings. By governing classification methodology, severity assessment, prioritization, validation, and continuous classification assurance, the module enables objective audit reporting, accountable governance, operational transparency, and independent verification across all operational domains.
