

Finding Documentation Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Audit Findings Standard

Operational Layer: Audit Findings Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Finding Documentation

Version: 1.0

Status: Canonical · Open Module

Origin Date: 30 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Finding Documentation

Canonical Definition

Finding Documentation Module defines the governance framework for documenting validated audit findings in a complete, structured, traceable, and independently verifiable manner. It establishes documentation methodology, content requirements, governance controls, traceability mechanisms, and continuous documentation assurance necessary to preserve the integrity, transparency, and evidential value of every audit finding throughout its lifecycle.

Operational Role

Finding Documentation Module governs the documentation layer of audit findings by ensuring that every validated finding is recorded using standardized structures, complete supporting evidence, documented rationale, and full audit traceability.

Minimum Implementation Framework

1. Define Documentation Requirements

Establish mandatory documentation elements, evidence references, finding structure, responsible authorities, documentation quality requirements, and governance controls.

2. Define Documentation Methodology

Develop standardized procedures for recording findings, documenting supporting evidence, preserving reasoning, and maintaining methodological consistency.

3. Define Documentation Validation Logic

Verify that documentation is complete, accurate, evidence-linked, traceable, governance-compliant, and independently reproducible.

4. Define Governance Response

Establish procedures for incomplete documentation, documentation errors, missing evidence references, inconsistencies, governance exceptions, and corrective actions.

5. Preserve Documentation Records

Maintain complete documentation history, revisions, evidence references, approvals, timestamps, governance decisions, and audit trails throughout the complete audit lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An audit team completes the validation of governance findings within an autonomous AI environment.

Application

Finding Documentation Module governs the standardized recording of every validated finding together with supporting evidence, reasoning, classifications, and audit references.

Result

Audit findings become fully documented, traceable, evidence-supported, and suitable for governance review and future audits.

Use Case 2 — Regulatory Compliance Audit

Scenario

A regulatory authority prepares the official documentation of compliance audit findings.

Application

Finding Documentation Module governs the structure, completeness, evidence references, and traceability of every documented finding.

Result

Audit documentation remains complete, transparent, independently verifiable, and legally defensible throughout the governance lifecycle.

Canonical Closing Statement

Finding Documentation Module establishes the canonical governance framework for documenting validated audit findings. By governing documentation methodology, evidence traceability, governance controls, record completeness, and continuous documentation assurance, the module enables transparent audit reporting, accountable governance, operational integrity, and independent verification across all operational domains.
