

Finding Validation Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Audit Findings Standard

Operational Layer: Audit Findings Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Finding Validation

Version: 1.0

Status: Canonical · Open Module

Origin Date: 30 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Finding Validation

Canonical Definition

Finding Validation Module defines the governance framework for validating audit findings before they become official governed audit conclusions. It establishes validation methodology, evidence confirmation requirements, governance controls, review procedures, and continuous validation assurance necessary to ensure that every audit finding is accurate, sufficiently supported, methodologically justified, and independently verifiable.

Operational Role

Finding Validation Module governs the validation layer of audit findings by ensuring that every identified and classified finding is objectively confirmed before reporting, organizational response, or regulatory action.

Minimum Implementation Framework

1. Define Validation Requirements

Establish validation criteria, evidence sufficiency requirements, review authorities, governance thresholds, approval conditions, and validation responsibilities.

2. Define Validation Methodology

Develop standardized procedures for reviewing supporting evidence, confirming findings, documenting validation decisions, and ensuring methodological consistency.

3. Define Validation Logic

Verify that every finding is supported by verified evidence, correctly classified, objectively documented, and fully consistent with audit methodology and governance requirements.

4. Define Governance Response

Establish procedures for rejected findings, disputed validations, insufficient evidence, methodological inconsistencies, governance exceptions, and corrective actions.

5. Preserve Validation Records

Maintain complete validation history, supporting evidence, reviewer decisions, approvals, timestamps, governance actions, and revision records throughout the audit lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An internal audit identifies several governance findings affecting autonomous AI decision-making.

Application

Finding Validation Module governs the independent confirmation of each finding using verified evidence and standardized validation procedures.

Result

Only objectively supported and methodologically validated findings proceed to formal reporting and governance response.

Use Case 2 — Regulatory Compliance Audit

Scenario

A regulator reviews audit findings before issuing an official compliance decision.

Application

Finding Validation Module governs the validation of each finding by confirming evidence quality, methodological correctness, and governance conformity.

Result

Official audit findings remain accurate, transparent, evidence-based, and capable of independent verification.

Canonical Closing Statement

Finding Validation Module establishes the canonical governance framework for validating audit findings before they become official audit conclusions. By governing validation methodology, evidence confirmation, governance controls, review procedures, and continuous validation assurance, the module enables trustworthy audit reporting, accountable governance, operational integrity, and independent verification across all operational domains.
