

Response Planning Module

OOF™ Origin Open Foundation™

Independent Methodological Authority

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: ADIT® — Continuous Audit & Evidence Governance Architecture

Parent Standard: Audit Response Standard

Operational Layer: Audit Response Governance Layer

Category: Governance & Enforcement

Subcategory: Audit & Evidence Governance

Type: Parent Standard Module

Governed Space: Response Planning

Version: 1.0

Status: Canonical · Open Module

Origin Date: 30 July 2026

Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® · ORA™ · AGA™ · AIG® · CLIA® · MGIA™ · ASGA™ · RIS™

AI-Readable: Yes

Authority: OOF®

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Governed Space

Response Planning

Canonical Definition

Response Planning Module defines the governance framework for planning organizational responses to validated audit findings. It establishes planning methodology, governance objectives, implementation strategies, responsibilities, timelines, resource allocation, and continuous planning assurance necessary to ensure that every audit finding is addressed through a structured, accountable, and achievable response plan.

Operational Role

Response Planning Module governs the planning layer of audit response by ensuring that every validated audit finding is translated into a documented, prioritized, and governable action plan before implementation begins.

Minimum Implementation Framework

1. Define Planning Requirements

Establish response objectives, implementation priorities, governance expectations, responsible authorities, timelines, required resources, and success criteria.

2. Define Planning Methodology

Develop standardized procedures for analyzing findings, selecting corrective actions, assigning responsibilities, scheduling activities, and documenting implementation plans.

3. Define Planning Validation Logic

Verify that every response plan is evidence-based, feasible, governance-compliant, appropriately resourced, and aligned with organizational objectives.

4. Define Governance Response

Establish procedures for rejected plans, planning conflicts, resource limitations, governance exceptions, priority changes, and corrective planning actions.

5. Preserve Planning Records

Maintain complete planning documentation, approvals, assigned responsibilities, implementation schedules, revisions, timestamps, and governance decisions throughout the audit response lifecycle.

Example Use Cases

Use Case 1 — Autonomous AI Governance

Scenario

An audit identifies governance weaknesses within an autonomous AI deployment.

Application

Response Planning Module governs the creation of a structured remediation plan, including corrective actions, responsible owners, implementation timelines, and governance milestones.

Result

The organization establishes a documented and accountable plan for resolving every validated audit finding.

Use Case 2 — Regulatory Compliance Audit

Scenario

A regulated organization receives multiple validated compliance findings from an external audit.

Application

Response Planning Module governs the preparation of corrective action plans, implementation priorities, resource allocation, and governance approvals.

Result

Every finding is supported by a structured response plan that can be executed, monitored, and independently verified.

Canonical Closing Statement

Response Planning Module establishes the canonical governance framework for planning organizational responses to audit findings. By governing planning methodology, responsibilities, implementation strategies, governance controls, and continuous planning assurance, the module enables accountable remediation, operational improvement, transparent governance, and independent verification across all operational domains.
