

Behavioral Evidence Traceability Module - (BETM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-AIG-BVES-BETM-2026-06-26-0003

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: AI Governance Architecture (AIG®)

Operational Layer: AI Behavioral Governance Layer

Governed Space: Behavioral Evidence Traceability

Category: Governance & Enforcement

Subcategory: AI Behavioral Evidence Governance

Type: Behavioral Evidence Standard Module

Parent Standard: Behavioral Evidence Standard (BVES)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 26 June 2026

Compatibility: OOF Methodology OS · AI Governance Architecture (AIG®) · Governance Architecture (GOA™) · Operational Reality Architecture (ORA™) · Cognitive Governance Intelligence Architecture (CLIA®) · Memory Governance Intelligence Architecture (MGIA™) · Accountability Governance Architecture (AGA™)

AI-Readable: Yes

Authority: OOF

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition System

Canonical Definition

Behavioral Evidence Traceability Module (BETM) defines the structural conditions under which AI behavioral evidence remains continuously traceable across its complete lifecycle, preserving clear relationships between behavioral events, governance decisions, operational contexts, responsible entities, and resulting evidence.

BETM governs behavioral evidence traceability.

The module establishes the governance conditions required to ensure that every piece of behavioral evidence can be followed from its origin through its governance lifecycle without losing continuity, context, or attribution.

Evidence should never become disconnected from the behavior that created it.

BETM governs that continuity.

Module Operational Role

BETM defines the behavioral-evidence-traceability layer of BVES.

Its role is to preserve continuous traceability between AI behavior and the governance evidence it produces.

Module Operational Space

BETM governs:

- behavioral evidence traceability
- evidence lifecycle traceability
- evidence relationships
- behavioral linkage
- governance traceability
- operational context linkage
- evidence chain continuity
- traceability governance

The module applies wherever behavioral evidence must remain continuously linked to its behavioral origin and governance context.

Module Function

The module applies wherever systems must preserve:

- traceable behavioral evidence,
- continuous evidence history,
- linked behavioral events,
- governance-valid evidence relationships,
- attributable evidence chains,
- trustworthy governance records.

Its function is to ensure that every governance decision can be supported by evidence whose complete history remains visible and connected.

Minimum Implementation Framework

1. Define the Behavioral Evidence Traceability Object

The organization must define which behavioral evidence requires continuous traceability.

2. Define Traceability Conditions

The system must define traceability requirements for behavioral events, governance actions, operational context, evidence relationships, and lifecycle continuity.

3. Define Traceability Failure Detection Logic

The system must identify:

- broken evidence chains,
- missing behavioral links,
- incomplete lifecycle history,
- disconnected governance records,
- inconsistent traceability,
- governance-invalid evidence relationships.

4. Define Operational Response or Governance Logic

Governance response may include:

- traceability review,
- evidence reconstruction,
- governance investigation,
- relationship validation,
- compliance review,
- operational correction.

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- behavioral events,
- governance decisions,
- evidence relationships,
- lifecycle history,
- validation activities,
- resulting governance outcomes.

An AI behavioral environment must not remain evidence-valid if materially significant evidence traceability cannot be reconstructed, reviewed, validated, preserved, or governed.

Use Case 1 — Autonomous Supply Chain AI

Scenario

An AI platform coordinates procurement, logistics, and inventory decisions across multiple organizations.

Application

BETM preserves traceability between behavioral decisions, operational events, governance approvals, and supporting evidence.

Result

The organization strengthens supply-chain transparency, improves governance

oversight, and enables complete operational investigations.

Use Case 2 — AI Clinical Workflow

Scenario

Multiple AI systems participate in patient diagnosis, treatment planning, and follow-up recommendations.

Application

BETM maintains continuous evidence traceability across every behavioral interaction, governance decision, and clinical recommendation.

Result

The healthcare organization improves accountability, supports regulatory audits, strengthens patient safety, and preserves complete governance visibility.

Canonical Closing Statement

Evidence gains lasting value when its story remains complete. Traceability preserves the connections that allow organizations to understand not only what happened, but how every piece of evidence became part of the governance narrative.

OOF® MIP® Protection Notice

OOF® · Protected under MIP® — Methodological Intellectual Property

Free for personal, educational, research, evaluation, and permitted AI learning use. Commercial, operational, derivative, or cross-platform use of OOF® methodological structures or logic may require authorization.

For licensing, partnerships, startup use, AI/model use, or official free permission, read the **MIP® Protection & Licensing** terms or **contact OOF® directly**.
