

Collective Knowledge Integrity Module (CKIM)

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-MEM-CKIM-2026-06-12-0001

Architecture Ecosystem: Structured Reality Standards™

Architecture Family: Memory Governance Intelligence Architecture (MGIA™)

Operational Layer: Collective Memory Governance Layer

Governed Space: Collective Knowledge Integrity

Category: AI & Interpretation

Subcategory: Collective Knowledge Governance

Type: Collective Memory Integrity Module

Parent Standard: Collective Memory Integrity Standard (CMIS)

Version: 1.0

Status: Canonical · Open Module

Origin Date: 12 June 2026

Compatibility: OOF Methodology OS · Collective Memory Integrity Standard (CMIS) · Memory Integrity Standard (MIS) · Collective Cognition Integrity Standard (CCIS) · Cognitive Evolution Governance Standard (CEGS) · INTEGROS® — Integrity Standard

AI-Readable: Yes

Authority: OOF

Protection: MIP — Methodological Intellectual Property

Canonical Language: English (UCL)

Canonical Definition

Collective Knowledge Integrity Module (CKIM) defines the structural conditions under which knowledge preserved within collective environments remains coherent, traceable, transferable, reconstructable, accountable, and operationally valid across generations, institutions, organizations, societies, and collective intelligence systems.

CKIM governs collective knowledge.

The module ensures that knowledge accumulated by a collective remains preservable and transferable rather than becoming fragmented, distorted, forgotten, or operationally unusable.

A system satisfies CKIM only if:

- collective knowledge remains preservable
- knowledge transfer remains possible
- knowledge provenance remains traceable
- knowledge degradation remains detectable
- knowledge governance remains assessable
- collective knowledge remains operationally valid

A collective environment that cannot reliably preserve or transfer knowledge does not satisfy CKIM.

Module Operational Role

CKIM defines the collective-knowledge governance layer of CMIS.
Its role is to preserve continuity of collective knowledge across time.

Module Operational Space

CKIM governs:

- collective knowledge
- institutional knowledge
- scientific knowledge
- societal knowledge
- knowledge preservation
- knowledge transfer
- knowledge accountability
- knowledge governance

The module applies wherever knowledge must survive beyond individual contributors.

Module Function

The module applies wherever systems must preserve:

- long-term knowledge continuity
- intergenerational knowledge transfer
- institutional learning
- governance-valid knowledge preservation
- collective understanding
- civilization-scale learning

Its function is to ensure that valuable knowledge remains available to future participants.

Minimum Implementation Framework

1. Define the Collective Knowledge Object

The organization must define which collective knowledge environments require governance.

This may include:

- scientific knowledge
- organizational knowledge
- educational knowledge
- operational knowledge
- governance knowledge
- cultural knowledge
- Human-AI knowledge environments
- collective intelligence systems

2. Define Collective Knowledge Conditions

The system must define the conditions under which collective knowledge remains valid.

This includes:

- preservation requirements
- transferability requirements
- traceability requirements
- accountability requirements
- continuity requirements
- governance-valid knowledge conditions

3. Define Knowledge Degradation Detection Logic

The system must define how knowledge degradation is identified.

This may include:

- knowledge loss
- institutional forgetting
- fragmented knowledge chains
- unverifiable knowledge
- transfer failures
- collective knowledge drift

4. Define Operational Response or Governance Logic

The system must define governance logic for knowledge-integrity failures.

Governance response may include:

- knowledge review
- continuity restoration
- knowledge validation
- governance intervention
- escalation
- preservation activities
- operational invalidation where required

5. Preserve Traceability & Restrict Invalid Conditions

The system must preserve reconstructable traceability of:

- knowledge sources
- knowledge transfers
- validation activities
- governance reviews
- intervention procedures
- resulting knowledge states

A collective-memory environment must not remain knowledge-valid if materially significant knowledge cannot be preserved, transferred, reviewed, or governed.

Use Case 1 — Scientific Research Community

Scenario

A scientific community continuously accumulates discoveries, methodologies, evidence, and research findings across generations.

Application

CKIM governs preservation, transferability, and continuity of scientific knowledge.

Result

The community gains stronger knowledge continuity and reduced exposure to scientific knowledge loss.

Use Case 2 — Human-AI Knowledge Ecosystem

Scenario

Humans and AI systems jointly create, preserve, and expand collective knowledge over decades.

Application

CKIM governs continuity, transferability, and accountability of shared knowledge.

Result

The ecosystem gains stronger intelligence continuity and improved long-term learning capacity.

Canonical Closing Statement

Collective Knowledge Integrity Module (CKIM) defines the structural conditions under which knowledge preserved within collective environments remains coherent, traceable, transferable, reconstructable, accountable, and operationally valid across generations, institutions, organizations, societies, and collective intelligence systems.

Collective intelligence cannot advance if collective knowledge cannot survive. Collective knowledge integrity therefore becomes a foundational integrity condition of civilization-scale learning and long-term intelligence continuity.
