

Carbon Integrity™ Standard

OOF™ Origin Open Foundation™

Independent Methodological Authority

OriginID: OOF-OID-ENV-CI-2026-02-24-0002

Category: Environmental Integrity Standards (ENV)

Subcategory: Carbon Integrity™

Version: 1.0

Status: Canonical · Open Standard

Effective Date: 24 February 2026

Authority: OOF™ Origin Open Foundation™

Protection: MIP™ — Methodological Intellectual Property

Canonical Language: English

A. Standard Abstract

The **Carbon Integrity™ Standard** defines structural transparency conditions required for any carbon-related claim, disclosure, or sustainability positioning made by an organization, product, or production system.

The standard establishes a transparency baseline for carbon communication.

It does not calculate emissions.

It does not certify carbon neutrality.

It does not replace international carbon accounting frameworks.

Carbon Integrity™ introduces structural accountability for carbon-related disclosure.

B. Canonical Definition

Carbon Integrity™ is the structural transparency condition in which the operational boundary of a carbon-related claim, the status of carbon information, and the responsible entity are clearly disclosed within public communication.

Carbon Integrity™ establishes integrity of disclosure rather than verification of emission quantities.

C. Structural Base

This standard is based on the following principles:

- Transparency Before Certification Principle
 - Claim Boundary Clarity
 - Measurement Status Disclosure
-

- Responsibility Attribution
- Non-Substitution of Regulatory Authority

Carbon Integrity™ ensures that carbon-related statements cannot exist without structural disclosure context.

D. Scope

This standard applies to carbon-related communication including:

- product-level carbon statements
- production-related emission communication
- sustainability positioning by organizations
- supply chain carbon transparency communication

This standard does not replace:

- ISO carbon standards
- GHG Protocol accounting systems
- national emission reporting frameworks
- carbon credit certification schemes

Carbon Integrity™ operates as a transparency layer rather than a measurement methodology.

E. Structural Transparency Conditions

Entities referencing the Carbon Integrity™ Standard must maintain transparent disclosure of the following structural elements.

1. Boundary Definition

The operational boundary of any carbon-related statement must be clearly defined.

Examples may include:

- production site only
- production and packaging
- production and distribution
- full operational footprint

Undefined or ambiguous boundaries invalidate carbon-related claims.

2. Measurement Status Transparency

The entity must disclose the status of carbon-related information.

Possible status declarations include:

- independently verified data
- internally calculated data
- estimated information
- not formally measured

Absence of measurement must not be concealed.

3. Offset Transparency (If Applicable)

If carbon offsets are used, the entity should disclose:

- type of offset
- verification status
- application year

Offset usage must not be implied when offsets are not applied.

4. Responsibility Attribution

A responsible entity must acknowledge accountability for the disclosed carbon-related information.

Carbon Integrity™ requires visible responsibility assignment for any public claim.

F. Compatibility

ACarbon Integrity™ operates within the Environmental Integrity Standards architecture and may function alongside other environmental transparency standards including:

- Soil Integrity™ Standard
- Water Integrity™ Standard
- Origin Eco™ Standard

It may also operate alongside ESG reporting structures and sustainability disclosures.

H. Licensing & Usage

Reference use of this standard is permitted.

Implementation of Soil Integrity™ within structured commercial ecosystems may require authorization under **MIP™ Methodological Intellectual Property**.

Canonical Closing Statement

Carbon credibility begins with structural transparency.
