

CGRM — Comparison & Main Difference

What Makes CGRM Different

- Most standards define rules.
CGRM defines how governance actually operates.
 - Most standards are checked periodically.
CGRM operates continuously.
 - Most standards describe processes.
CGRM assigns responsibility.
 - Most standards rely on certification.
CGRM relies on accountability.
 - Most standards are static.
CGRM is a live system.
-

Structural Difference

Traditional standards are:

- document-based
- audit-driven
- periodically verified
- externally controlled

CGRM is:

- system-based
 - operational
 - continuously active
 - internally enforced
-

Methodology-Based vs. Document-Based

Most standards are not built on a full methodology structure.

They define:

- requirements
- controls
- recommendations

But they do not define:

- how governance operates in real time
 - how responsibility is structurally enforced
 - how systems behave under pressure
-

CGRM is built on a methodology framework.

It includes:

- standard (rules)
 - modules (implementation)
 - self-declaration (entry)
 - implementation layer (execution)
 - compatibility (system state)
-

Operational vs. Theoretical

Traditional standards:

- describe what should exist
- rely on interpretation
- are applied through documentation

CGRM:

- defines what must operate
 - requires real-time conditions
 - exists as an operational state
-

Responsibility vs. Process

Traditional standards:

- focus on processes
- allow responsibility diffusion

CGRM:

- anchors responsibility
 - requires accountability
 - eliminates anonymity in decision-making
-

Certification vs. Accountability

Traditional systems:

- require external certification
- delay implementation
- create dependency

CGRM:

- allows immediate self-declaration
 - creates responsibility instantly
 - enables operation without delay
-

System Reality

Traditional standards:

- can exist without real enforcement

CGRM:

cannot exist without operation

Core Difference

Traditional standards describe governance.

CGRM makes governance operational.

Closing Statement

CGRM is not an evolution of existing standards.

It defines a different category.
