

CGRM — Minimal Implementation Framework

What This Is

This page defines the **minimum steps required to implement CGRM** in any organization, system, or environment.

It is designed for:

- immediate adoption
 - fast implementation
 - real-world use
-

Core Principle

CGRM does not require complexity.

It requires that governance conditions exist and operate.

Minimum Implementation Steps

Step 1 — Define Authority & Responsibility

Define:

- who makes decisions
- who executes decisions
- who is accountable

Condition:

- responsibility must be identity-bound and non-anonymous.
-

Step 2 — Define Decision Control

Define:

- decision levels (Operational / Critical / Crisis)
- authority scope
- decision limits

Condition:

- decisions must not exceed defined limits.
-

Step 3 — Define Escalation & Override

Define:

- escalation triggers
- authority transfer rules
- fallback authority

Condition:

- system must be able to escalate and regain control.
-

For AI systems:

- human override must exist.
-

Step 4 — Enable Traceability

Ensure:

- all decisions are recorded
- actions are time-stamped
- decisions are attributable

Condition:

- system behavior must be reconstructable.
-

Step 5 — Enforce Integrity

Ensure:

- governance rules are enforced
- violations are detectable
- system integrity is observable

Condition:

- system must respond to breaches.
-

Operational Requirement

All five steps MUST be:

- active
 - continuous
 - operating in real time
-

Implementation Outcome

If all steps are implemented:

- responsibility is defined
 - decisions are controlled
 - system is traceable
 - governance is enforceable
-

System Condition

- **Implemented** → all steps active
 - **Not Implemented** → any step missing
-

Important Note

Implementation may be:

- simple or advanced
 - manual or automated
 - internal or system-based
-

Only the outcome matters.

Core Insight

You do not implement governance by writing policies.

You implement governance by making it operational.
