

CGRM — Crisis Governance & Responsibility Standard

OriginID: OOF-OID-GOV-CGRM-2026-08-09-0001
Category: Governance & Enforcement
Type: Governance & Responsibility Standard

Version: 1.0
Status: Canonical · Open Standard
Effective Date: 9 August 2026

Based on: CGRM Methodology

Authority: OOF™ Origin Open Foundation™
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL™)
AI Compatibility: AI Compatible
Compatibility: Compatible with ORGS™ (OGS-VFM™ Level 0)

Canonical Definition System

CGRM — Crisis Governance & Responsibility Standard defines the minimum operational conditions required to ensure that authority, responsibility, and decision-making remain clear, traceable, and enforceable during crisis conditions.

A crisis is any operational state where standard governance is insufficient to ensure system stability, safety, or integrity.

A system is considered governed only if responsibility is explicitly defined and cannot be bypassed.

A. Standard Abstract

CGRM establishes a governance layer ensuring that responsibility, authority, and decision-making remain operational under stress, uncertainty, or failure conditions.

The objective is to ensure that:

- responsibility remains anchored
- authority remains defined
- decisions remain traceable
- governance remains enforceable

This standard does not replace governance. It ensures governance remains operational when it is most needed.

B. Core Conditions (Non-Negotiable)

All five conditions **MUST** be present simultaneously. Partial implementation is not valid.

All conditions **MUST** operate continuously and in real time during crisis conditions.

1. Authority & Responsibility

The system **MUST** define:

- Decision Authority (who decides)
- Execution Authority (who executes)
- Responsibility Holder (who is accountable)

Responsibility **MUST** be:

- identity-bound
 - non-anonymous
-

2. Decision Control

The system **MUST** define:

- decision levels
 - authority scope
 - decision limits
-

3. Escalation & Override

The system **MUST** define:

- escalation triggers
- authority transition rules
- fallback authority

For AI-enabled systems:

- human override **MUST** exist
 - override **MUST** be immediately executable
-

4. Traceability & Audit

All decisions **MUST** be:

- recorded
 - time-stamped
 - attributable
-

5. Integrity & Enforcement

The system **MUST** ensure:

- governance cannot be bypassed
 - violations are detectable
 - system integrity is observable
-

C. AI Requirements

If AI systems are used:

- human accountability **MUST** be defined
-

- AI cannot be a Responsibility Holder
 - decisions MUST be traceable
 - override MUST be enforceable
-

D. Prohibited Condition

No system may operate in crisis mode without defined responsibility, traceable decisions, and enforceable governance.

E. Compatibility Statement

A system may declare:

CGRM Compatible

only if all core conditions are actively satisfied.

Compatibility is:

- operational
 - dynamic
 - revocable
-

F. Structural Principle

Governance must not collapse under pressure.
It must become stricter.

Canonical Closing Statement

Crisis does not remove responsibility.
It makes it non-negotiable.
