

Classification Assignment Governance Module (CAGM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA® — Classification Architecture
Parent Standard: Classification Assignment Standard (CAS)
Operational Layer: Classification Assignment Governance Layer
Category: AI & Interpretation
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Assignment Governance
Version: 1.0
Status: Canonical · Open Module
Origin Date: 4 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · ADIT® · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP® — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Assignment Governance

Canonical Definition

Classification Assignment Governance Module defines the governance framework for establishing, managing, monitoring, and continuously improving the governance of classification assignment throughout its complete lifecycle. It establishes governance methodology, governance controls, accountability mechanisms, oversight procedures, and continuous governance principles necessary to ensure that classification assignment remains controlled, transparent, consistent, accountable, and independently verifiable.

Operational Role

Classification Assignment Governance Module governs the governance layer of classification assignment by establishing authority, accountability, oversight, policy enforcement, and continuous governance for the complete assignment process.

Minimum Implementation Framework

1. Define Governance Requirements

Establish governance objectives, assignment governance policies, responsible authorities, accountability structures, governance responsibilities, and acceptance criteria.

2. Define Governance Methodology

Develop standardized procedures for governing classification assignments, assigning responsibilities, monitoring governance performance, managing assignment activities, and documenting governance decisions.

3. Define Governance Validation Logic

Verify that classification assignment governance remains effective, consistently applied, governance-compliant, methodologically sound, and capable of independent verification throughout the classification lifecycle.

4. Define Governance Response

Establish procedures for governance violations, assignment disputes, accountability failures, governance exceptions, corrective actions, escalation mechanisms, and continuous governance improvement.

5. Preserve Governance Records

Maintain governance policies, assignment governance decisions, accountability records, validation reports, approvals, revision history, timestamps, and complete governance audit trails throughout the classification lifecycle.

Use Case 1 — Autonomous AI Governance

Scenario

An organization establishes governance oversight for classification assignments performed by autonomous AI systems.

Application

Classification Assignment Governance Module governs assignment ownership, governance oversight, accountability, policy enforcement, and continuous monitoring across the complete assignment process.

Result

Classification assignments remain transparent, accountable, consistently governed, and independently verifiable throughout autonomous operations.

Use Case 2 — Enterprise Classification Governance

Scenario

A multinational enterprise governs classification assignment practices across multiple business units and jurisdictions.

Application

Classification Assignment Governance Module governs governance responsibilities, assignment oversight, policy compliance, periodic reviews, and continuous governance improvement.

Result

Classification assignment governance remains standardized, operationally reliable, accountable, and consistently applied across the enterprise.

Canonical Closing Statement

Classification Assignment Governance Module establishes the canonical governance framework for governing classification assignment throughout the complete classification lifecycle. By governing governance methodology, accountability, oversight, governance controls, validation procedures, and continuous assignment governance, the module enables trustworthy classification, operational reliability, accountable governance, and independent verification across all operational domains.
