

Classification Approval Module (CAM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA® — Classification Architecture
Parent Standard: Classification Assignment Standard (CAS)
Operational Layer: Classification Assignment Governance Layer
Category: AI & Interpretation
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Approval
Version: 1.0
Status: Canonical · Open Module
Origin Date: 4 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · ADIT® · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP® — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Approval

Canonical Definition

Classification Approval Module defines the governance framework for reviewing, authorizing, and approving classification assignments before they become operational. It establishes approval methodology, governance controls, approval authorities, validation mechanisms, and continuous approval governance necessary to ensure that every classification assignment is formally authorized, justified, governance-compliant, and independently verifiable.

Operational Role

Classification Approval Module governs the approval layer of classification assignment by ensuring that classification decisions receive appropriate governance authorization before becoming effective.

Minimum Implementation Framework

1. Define Approval Requirements

Establish approval objectives, governance requirements, approval authorities, authorization criteria, documentation obligations, and acceptance conditions.

2. Define Approval Methodology

Develop standardized procedures for reviewing classification assignments, evaluating supporting evidence, obtaining approvals, documenting authorization decisions, and managing approval workflows.

3. Define Approval Validation Logic

Verify that classification approvals are granted by authorized decision-makers, supported by sufficient evidence, governance-compliant, methodologically consistent, and independently verifiable.

4. Define Governance Response

Establish procedures for rejected approvals, disputed authorization, governance exceptions, reassessment activities, corrective actions, escalation procedures, and approval reassignment.

5. Preserve Approval Records

Maintain approval decisions, authorization records, supporting evidence, governance approvals, validation reports, revision history, timestamps, and complete governance audit trails throughout the classification lifecycle.

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform requires governance approval before high-risk operational classifications become active.

Application

Classification Approval Module governs the authorization process by ensuring that every high-impact classification is reviewed, approved, documented, and validated before deployment.

Result

Classification approvals remain transparent, accountable, governance-compliant, and independently verifiable.

Use Case 2 — Government Information Classification

Scenario

A government authority requires formal authorization before

assigning classified status to sensitive information.

Application

Classification Approval Module governs the approval process by ensuring that authorized officials review supporting evidence, validate governance compliance, and formally approve the classification.

Result

Classification approvals remain controlled, traceable, methodologically consistent, and suitable for independent oversight.

Canonical Closing Statement

Classification Approval Module establishes the canonical governance framework for authorizing classification assignments throughout the complete classification lifecycle. By governing approval methodology, authorization controls, governance validation, approval procedures, and continuous approval governance, the module enables trustworthy classification, operational consistency, accountable governance, and independent verification across all operational domains.
