

Classification Decision Module (CDM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA® — Classification Architecture
Parent Standard: Classification Assignment Standard (CAS)
Operational Layer: Classification Assignment Governance Layer
Category: AI & Interpretation
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Decision
Version: 1.0
Status: Canonical · Open Module
Origin Date: 4 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · ADIT® · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP® — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Decision

Canonical Definition

Classification Decision Module defines the governance framework for making, documenting, and governing official classification decisions using approved scope, established criteria, and validated context. It establishes decision methodology, governance controls, decision validation, approval mechanisms, and continuous decision governance necessary to ensure that every classification decision is accurate, justified, reproducible, transparent, and independently verifiable.

Operational Role

Classification Decision Module governs the decision layer of classification assignment by ensuring that every classification outcome is formally determined through a standardized, evidence-based, and governance-compliant decision process.

Minimum Implementation Framework

1. Define Decision Requirements

Establish decision objectives, governance requirements, decision authorities, acceptance criteria, documentation obligations, and approval conditions.

2. Define Decision Methodology

Develop standardized procedures for evaluating classification outcomes, making official classification decisions, documenting decision rationale, and recording supporting evidence.

3. Define Decision Validation Logic

Verify that every classification decision is evidence-based, governance-compliant, methodologically consistent, fully justified, and independently reproducible.

4. Define Governance Response

Establish procedures for disputed decisions, inconsistent assignments, governance exceptions, reassessment activities, corrective actions, escalation procedures, and decision review.

5. Preserve Decision Records

Maintain classification decisions, supporting evidence, governance approvals, decision history, validation reports, revisions, timestamps, and complete governance audit trails throughout the classification lifecycle.

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI platform assigns official classifications to detected operational anomalies.

Application

Classification Decision Module governs the formal decision process by ensuring that every assigned classification is supported by validated evidence, approved methodology, and governance controls.

Result

Classification decisions remain consistent, transparent, reproducible, and independently verifiable.

Use Case 2 — National Security Information Classification

Scenario

A government agency assigns security classifications to sensitive operational documents.

Application

Classification Decision Module governs the official decision process by ensuring that each classification is authorized, documented, justified, and fully traceable.

Result

Security classifications remain trustworthy, governance-compliant, auditable, and operationally reliable.

Canonical Closing Statement

Classification Decision Module establishes the canonical governance framework for making official classification decisions. By governing decision methodology, governance controls, validation procedures, approval mechanisms, and continuous decision governance, the module enables accurate classification, operational consistency, accountable governance, and independent verification across all operational domains.
