

Classification Assurance Review Module (CARM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Assurance Standard (CAS)
Operational Layer: Classification Assurance Governance Layer
Category: Governance & Classification
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Assurance Review
Version: 1.0
Status: Canonical · Open Module
Origin Date: 6 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP® — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Assurance Review

Canonical Definition

Classification Assurance Review Module defines the governance framework for performing structured, independent, and repeatable reviews of the complete classification assurance process. It establishes review methodology, governance controls, evaluation criteria, improvement mechanisms, review validation, and continuous review governance necessary to ensure that classification assurance remains effective, objective, transparent, methodologically sound, and continuously improved throughout its complete lifecycle.

Operational Role

Classification Assurance Review Module governs the review layer of classification assurance by systematically evaluating assurance methodology, governance effectiveness, assurance outcomes, identified improvement opportunities, and long- term assurance performance.

Minimum Implementation Framework

1. Define Review Requirements

Establish review objectives, governance requirements, evaluation criteria, review frequency, responsible authorities, and expected outcomes.

2. Define Review Methodology

Develop standardized procedures for reviewing assurance activities, evaluating governance effectiveness, documenting observations, identifying improvement opportunities, reporting review results, and maintaining review consistency.

3. Define Review Validation Logic

Verify that the classification assurance process remains effective, complete, governance-compliant, methodologically consistent, operationally reliable, and capable of continuous improvement.

4. Define Governance Response

Establish procedures for review findings, improvement recommendations, governance deficiencies, reassessment requirements, corrective actions, and continuous assurance enhancement.

5. Preserve Review Records

Maintain review reports, governance decisions, improvement actions, validation history, approvals, timestamps, lessons learned, and complete audit trails throughout the classification assurance lifecycle.

Use Case 1 — Autonomous AI Governance

Scenario

An organization performs a periodic review of the classification assurance program governing autonomous AI systems.

Application

Classification Assurance Review Module governs structured evaluation of assurance methodology, governance effectiveness, review findings, assurance performance, and continuous improvement opportunities.

Result

The organization's classification assurance capability continuously evolves while remaining objective, effective, transparent, and independently trustworthy.

Use Case 2 — Regulatory Classification Oversight

Scenario

A regulatory authority performs periodic reviews of classification assurance practices implemented across regulated organizations.

Application

Classification Assurance Review Module governs systematic assessment of assurance quality, governance effectiveness, review outcomes, validation consistency, and improvement initiatives.

Result

Classification assurance practices remain consistently effective, continuously improved, operationally reliable, and aligned with long-term governance objectives.

Canonical Closing Statement

Classification Assurance Review Module establishes the canonical governance framework for continuously reviewing and improving classification assurance. By governing review methodology, governance evaluation, improvement mechanisms, validation procedures, and continuous review governance, the module enables trustworthy classification assurance, operational excellence, accountable governance, and independent verification across all operational domains.
