

Context Evaluation Module (CEM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA® — Classification Architecture
Parent Standard: Classification Context Standard (CCXS)
Operational Layer: Classification Context Governance Layer
Category: AI & Interpretation
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Context Evaluation
Version: 1.0
Status: Canonical · Open Module
Origin Date: 3 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · ADIT® · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Context Evaluation

Canonical Definition

Context Evaluation Module defines the governance framework for evaluating the relevance, significance, applicability, and operational impact of identified contextual factors before classification decisions are made. It establishes evaluation methodology, governance controls, assessment criteria, validation mechanisms, and continuous evaluation governance necessary to ensure that only appropriate and methodologically justified context influences classification outcomes.

Operational Role

Context Evaluation Module governs the evaluation layer of classification context governance by assessing whether identified contextual factors are relevant, sufficient, reliable, and appropriate for the intended classification.

Minimum Implementation Framework

1. Define Evaluation Requirements

Establish evaluation objectives, relevance criteria, governance requirements, responsible authorities, acceptance thresholds, and assessment rules.

2. Define Evaluation Methodology

Develop standardized procedures for assessing contextual relevance, operational significance, dependencies, priorities, and potential classification impact.

3. Define Evaluation Validation Logic

Verify that evaluated contextual factors are accurate, relevant, governance-compliant, methodologically justified, and appropriate for the classification process.

4. Define Governance Response

Establish procedures for irrelevant context, conflicting evaluations, insufficient contextual evidence, reassessment requirements, corrective actions, and governance escalation.

5. Preserve Evaluation Records

Maintain contextual evaluation reports, governance decisions, validation records, assessment history, approvals, timestamps, and complete governance audit trails throughout the classification lifecycle.

Use Case 1 — Autonomous AI Governance

Scenario

An autonomous AI system evaluates operational context before classifying detected safety events.

Application

Context Evaluation Module governs assessment of environmental conditions, operational status, regulatory requirements, and mission priorities to determine which contextual factors should influence the classification.

Result

Classification decisions remain operationally relevant, explainable, and consistently aligned with governance requirements.

Use Case 2 — Financial Risk Classification

Scenario

A financial institution evaluates multiple economic, legal, and operational factors before classifying investment risks.

Application

Context Evaluation Module governs the assessment of contextual relevance and classification impact before the final risk classification is assigned.

Result

Risk classifications become consistent, evidence-based, contextually appropriate, and independently verifiable.

Canonical Closing Statement

Context Evaluation Module establishes the canonical governance framework for evaluating contextual relevance before classification decisions are made. By governing evaluation methodology, contextual assessment, governance controls, validation procedures, and continuous context evaluation, the module enables accurate classification, operational consistency, accountable governance, and independent verification across all operational domains.
