

Classification Consistency Module (CCM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Foundation Standard (CFS)
Operational Layer: Classification Foundation Governance Layer
Category: AI & Interpretation
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Consistency
Version: 1.0
Status: Canonical · Open Module
Origin Date: 3 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENTITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · ADIT® · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Consistency

Canonical Definition

Classification Consistency Module defines the governance framework for establishing, preserving, evaluating, and continuously improving the consistency of classification across entities, systems, organizations, operational environments, and time. It establishes consistency methodology, governance controls, validation mechanisms, comparison criteria, and continuous consistency management necessary to ensure that equivalent classification situations always produce equivalent, objective, reproducible, and governance-valid classification outcomes.

Operational Role

Classification Consistency Module governs the consistency layer of classification governance by ensuring that identical or equivalent classification conditions produce consistent results regardless of the classifier, operational environment, timing, or implementation method.

Minimum Implementation Framework

1. Define Consistency Requirements

Establish consistency objectives, governance expectations, comparison criteria, equivalence rules, responsible authorities, and acceptance thresholds.

2. Define Consistency Methodology

Develop standardized procedures for evaluating classification consistency, comparing classification outcomes, identifying inconsistencies, documenting findings, and maintaining methodological alignment.

3. Define Consistency Validation Logic

Verify that classification outcomes remain internally consistent, objectively reproducible, governance-compliant, methodologically aligned, and equivalent under identical classification conditions.

4. Define Governance Response

Establish procedures for inconsistent classifications, governance exceptions, methodological conflicts, corrective actions, reassessment activities, and continuous consistency improvement.

5. Preserve Consistency Records

Maintain consistency assessments, comparison reports, governance decisions, validation results, corrective actions, revision history, timestamps, and complete governance audit trails throughout the classification lifecycle.

Use Case 1 — AI Dataset Classification

Scenario

An organization classifies identical AI datasets across multiple business units operating in different countries.

Application

Classification Consistency Module governs the evaluation of classification outcomes to ensure that identical datasets receive identical classifications regardless of organizational location or evaluation team.

Result

Classification remains consistent, objective, reproducible, and governance-valid across the complete organizational ecosystem.

Use Case 2 — International Regulatory Classification

Scenario

Multiple regulatory authorities adopt a common methodology for classifying regulated operational activities.

Application

Classification Consistency Module governs comparison, validation, and continuous monitoring of classification decisions to ensure methodological consistency across participating authorities.

Result

Regulatory classifications become harmonized, transparent, independently reproducible, and consistently governed across international operational environments.

Canonical Closing Statement

Classification Consistency Module establishes the canonical governance framework for preserving consistent classification outcomes throughout the complete classification lifecycle. By governing consistency methodology, governance controls, comparison criteria, validation mechanisms, and continuous consistency improvement, the module enables objective classification, methodological reliability, operational harmonization, and trustworthy governance across all operational domains.
