

Classification Foundation Module (CFM)

Architecture Ecosystem: Structured Reality Standards™
Architecture Family: CLA™ — Classification Architecture
Parent Standard: Classification Foundation Standard (CFS)
Operational Layer: Classification Foundation Governance Layer
Category: AI & Interpretation
Subcategory: Classification Governance
Type: Parent Standard Module
Governed Space: Classification Foundation
Version: 1.0
Status: Canonical · Open Module
Origin Date: 3 August 2026
Compatibility: OOF Methodology OS · GOA™ · OBIDENITY® · INTEGROS® ·
ORA™ · AGA™ · AIG® · CLIA® ·
MGIA™ · ASGA™ · ADIT® · RIS™
AI-Readable: Yes
Authority: OOF®
Protection: MIP™ — Methodological Intellectual Property
Canonical Language: English (UCL)

Governed Space

Classification Foundation

Canonical Definition

Classification Foundation Module defines the governance framework for establishing, documenting, maintaining, and continuously validating the methodological foundation upon which all governed classification activities depend. It establishes foundational classification principles, governance rules, structural consistency, methodological requirements, and objective implementation conditions necessary to ensure that every classification begins from a common, reproducible, explainable, and governance-valid methodological basis.

Operational Role

Classification Foundation Module governs the foundational layer of classification governance by ensuring that every classification activity is built upon consistent methodological principles before classification criteria, structures, assignments, or validation activities begin.

Minimum Implementation Framework

1. Define Foundation Requirements

Establish foundational classification principles, governance objectives, methodological requirements, structural rules, responsible authorities, and acceptance conditions.

2. Define Foundation Methodology

Develop standardized procedures for establishing, documenting, reviewing, maintaining, and governing the methodological foundation supporting all classification activities.

3. Define Foundation Validation Logic

Verify that the classification foundation remains objective, consistent, reproducible, governance-compliant, methodologically complete, and suitable for all subsequent classification processes.

4. Define Governance Response

Establish procedures for methodological inconsistencies, governance exceptions, foundation revisions, corrective actions, continuous improvement, and revalidation of the classification foundation.

5. Preserve Foundation Records

Maintain foundational principles, governance decisions, methodological documentation, validation reports, approval history, revision records, timestamps, and complete governance audit trails throughout the classification lifecycle.

Use Case 1 — Enterprise AI Classification

Scenario

An enterprise establishes a unified classification methodology before deploying AI systems across multiple business units.

Application

Classification Foundation Module governs the establishment of common methodological principles, governance rules, and foundational consistency before operational classifications are created.

Result

The organization achieves objective, reproducible, interoperable, and governance-valid classification across all AI-enabled operations.

Use Case 2 — National Classification Framework

Scenario

A public authority develops a national classification methodology to harmonize classifications across multiple government agencies.

Application

Classification Foundation Module governs the creation of common methodological foundations, governance principles, structural consistency, and standardized classification rules before implementation.

Result

Classification becomes consistent, transparent, interoperable, independently reproducible, and methodologically aligned across the complete public governance ecosystem.

Canonical Closing Statement

Classification Foundation Module establishes the canonical governance framework for building trustworthy classification from a common methodological foundation. By governing foundational principles, governance rules, structural consistency, methodological requirements, and continuous foundation validation, the module enables objective classification, methodological integrity, operational consistency, and trustworthy governance across all operational domains.
